Peplow,2022-09-01 Embedded systems are today widely deployed in just about every piece of machinery from toasters to
spacecraft Embedded system designers face many challenges They are asked to produce increasingly complex systems using
the latest technologies but these technologies are changing faster than ever They are asked to produce better quality designs
with a shorter time to market They are asked to implement increasingly complex functionality but more importantly to satisfy
numerous other constraints To achieve the current goals of design the designer must be aware with such design constraints
and more importantly the factors that have a direct effect on them One of the challenges facing embedded system designers
is the selection of the optimum processor for the application in hand single purpose general purpose or application specific
Microcontrollers are one member of the family of the application specific processors The book concentrates on the use of
microcontroller as the embedded system s processor and how to use it in many embedded system applications The book
covers both the hardware and software aspects needed to design using microcontroller The book is ideal for undergraduate
students and also the engineers that are working in the field of digital system design Contents Preface Process design
