Meta-Ecosystem Dynamics Frederic Guichard,Justin

Marleau,2021-09-25 This book presents current meta ecosystem models and their derivation from classical ecosystem and metapopulation theories Specifically it reviews recent modelling efforts that have emphasized the role of nonlinear dynamics on spatial and food web networks and which have cast their implications within the context of spatial synchrony and ecological stoichiometry It suggests that these recent advances naturally lead to a generalization of meta ecosystem theories to spatial fluxes of matter that have both a trophic and non trophic impact on species Ecosystem dynamics refers to the cycling of matter and energy across ecological compartments through processes such as consumption and recycling Spatial dynamics established its ecological roots with metapopulation theories and focuses on scaling up local ecological processes through the limited movement of individuals and matter Over the last 15 years theories integrating ecosystem and spatial dynamics have quickly coalesced into meta ecosystem theories the focus of this book The book will be of interest to graduate students and researchers who wish to learn more about the synthesis of ecosystem and spatial dynamics which form the foundation of the theory of meta ecosystems

Disaster Management and Environmental Sustainability Sanjay Kumar,Suraj Kumar Singh,Shruti Kanga,Gowhar Meraj,Majid Farooq,M. S. Nathawat,2024-05-09 Overuse of natural resources results in environmental deterioration lowering the effectiveness of important ecosystem services such as the mitigation of floods and landslides This leads to a greater risk of disaster and in turn natural hazards that can further deteriorate the environment The deterioration of the capacity of the environment to meet social and ecological aims and demands is described as environmental degradation This degradation and the concomitant reduction of ecosystems and their irreplaceable services the benefits humans gain are driving disaster risk Changes to the environment can alter the frequency

and intensity of risks as well as our exposure and sensitivity to these hazards Addressing these issues requires improvement of the capacity to perform short and medium term operations in disaster management based on long term environmental considerations At the local level minimizing environmental degradation and ecosystem loss involves awareness of the links between unsustainable development and poverty Communities are often driven to ruin their natural environment as a short term coping mechanism for dealing with immediate issues for instance surviving a bad harvest by selling wood Strategies for decreasing poverty by investing in environment sensitive development should therefore support initiatives to minimize disaster risk and build resilience There are common aspects in successful policies throughout various regions at the policy level which extends to controlling climate change Tools such as integrated water resources and coastal zone management the removal of environmentally harmful subsidies especially on fossil fuels and or carbon taxes renewable energy marine protected areas and cross boundary biodiversity conservation are all examples of policies used in more than one region but customized to each context This scoping study finds and assesses available materials that relate environmental challenges and management with catastrophes and risk reduction activities in the Asia Pacific area This volume s analysis relies on case studies examples and the results of questionnaires and interviews of practitioners and organizations operating in the environment disaster and development domains
