**Geostatistics for Environmental Scientists** Richard Webster, Margaret A. Oliver, 2007-10-22 Geostatistics is essential for environmental scientists Weather and climate vary from place to place soil varies at every scale at which it is examined and even man made attributes such as the distribution of pollution vary The techniques used in geostatistics are ideally suited to the needs of environmental scientists who use them to make the best of sparse data for prediction and to plan future surveys when resources are limited Geostatistical technology has advanced much in the last few years and many of

these developments are being incorporated into the practitioner's repertoire. This second edition describes these techniques for environmental scientists. Topics such as stochastic simulation, sampling data, screening spatial covariances, the variogram, and its modeling and spatial prediction by kriging are described in rich detail. At each stage, the underlying theory is fully explained, and the rationale behind the choices given, allowing the reader to appreciate the assumptions and constraints involved.

Environmental Geology Workbook Jack W. Travis, 2019-02-27 Environmental geologists use a wide range of geologic data to solve environmental problems and conflicts. Professionals and academics in this field need to know how to gather information on such diverse conditions as soil type, rock structure, and groundwater flow, and then utilize it to understand geological site conditions. Field surveys, maps, well logs, bore holes, ground penetrating radar, aerial photos, geologic literature, and more help to reveal potential natural hazards in an area or how to remediate contaminated sites. This new workbook presents accessible activities designed to highlight key concepts in environmental geology and give students an idea of what they need to know to join the workforce as an environmental geologist, engineering geologist, geological engineer, or geotechnical engineer. Exercises cover Preparation, data collection, and data analysis. Descriptive and engineering properties of earth materials. Basic tools used in conjunction with geoenvironmental investigations. Forces operating on earth materials within the earth. Inanimate forces operating on earth materials at the surface of the earth. Human activities operating on earth materials. Each activity encourages students to think critically and develop deeper knowledge of environmental geology.
