The primary focus of this book is on techniques and concepts of cost and management accounting for strategic business decisions. In order to survive in the changing business environment, organizations should rethink their strategic philosophy and the role of management accounting. Management accounting systems exist to help managers make economic decisions. In preparing and assessing their strategic plans, organizations need information on many areas of their business environment. Management accounting is also in a process of change. Information Quality and Management Accounting Stephan Leitner, 2013-01-24

One of the main aims of management accounting is to provide managers with accurate information in order to provide a good basis for decision making. There is evidence that the information provided by management accounting systems (MAS) is distorted and the occurrence of biases in accounting information is widely accepted among users of MAS. At the same time, the intensity and the frequency of use of MAS increase too. Consequently, the quality of the provided information is critical. The focus of this simulation study is twofold. On the one hand, the impact of the sophistication of traditional costing systems on error propagation in the case of a set of input biases is investigated. On the other hand, the impact of single and multiple input biases on the quality of the information provided by traditional costing systems is focused. In order to investigate the research questions, a simulation approach is applied.
