society at large *The Origin of Life Patterns* Alan Rayner, 2017-03-30 Understanding the relationship between human cultural psychology and the evolutionary ecology of living systems is currently limited by abstract perceptions of space and boundaries as sources of definitive discontinuity This Brief explores the new understandings possible when space and boundaries are perceived instead as sources of receptive continuity and dynamic distinction between local identities and phenomena It aims to identify the recurrent patterns in which life is expressed over diverse scales in natural ecosystems and to explore how a new awareness of their evolutionary origin in the natural inclusion of space in flux can be related to human cultural psychology It explains why these patterns cannot adequately be represented or understood in terms of conventional logic and language that definitively isolates the material content from the spatial context of natural systems Correspondingly the Brief discusses how the perception of natural space as an infinite intangible receptive presence and of natural informational boundaries as continuous energetic flux revolutionizes our understanding of evolutionary processes The mutual natural inclusion of receptive space and informative flux in all distinguishable local phenomena enables evolutionary diversification to be understood as a fluid dynamic exploration of renewing possibility not an eliminative survival of the fittest Self identity is recognized to be a dynamic inclusion of natural neighborhood not a definitive exception from neighborhood The Origins of Life Patterns will be of interest to psychologists philosophers anthropologists evolutionary biologists ecologists mathematicians and physicists *Systemic Coaching* Peter Hawkins, Eve Turner, 2019-12-06 Hawkins and Turner argue that coaching needs to step up to deliver value to all the stakeholders of the coachee including those they lead colleagues investors customers partners their local community and also the wider ecology Systemic Coaching contains key chapters on how to contract in various settings how to work relationally and dialogically how to expand our own and others ecological awareness how to get greater value from supervision work with systemic ethics and expand our impact While illustrating why a new model of coaching is necessary Hawkins and Turner also provide the tools and approaches that coaches and clients need to deliver this greater impact accompanied by real life case examples and interviews from the authors and other leading coaches and leaders globally Systemic Coaching will be an invaluable resource for coaches in practice and in training mentors coach supervisors consultants in leadership development and HR and L D professionals and leaders *Science and Beyond* Rolf Sattler, 2021-06-22 Science coupled with technology has become the dominant force in most parts of the world Thus it affects our lives and society in many ways Yet misconceptions about science are widespread in governments the general public and even among many scientists Science and Beyond explores these misconceptions that may have grave and even disastrous consequences for individuals and society as was evident during the COVID 19 pandemic where they led to much unnecessary suffering sickness and death The misconceptions also obscure the limitations of science Not seeing these limitations prevents us from seeing and going beyond them which leads to a crippled life and an impoverished society But reaching beyond the limitations of science as outlined in this book can open the doors to a more fulfilled saner healthier

happier and more peaceful life and society **Management and the Sustainability Paradox** David Wasieleski, Sandra Waddock, Paul Shrivastava, 2020-07-12 Management and the Sustainability Paradox is about how humans became disconnected from their ecological environment throughout evolutionary history Beginning with the premise that people have competing innate natural drives linked to survival Survival can be thought of in the context of long term genetic propagation of a species but at the same time it involves overcoming of immediate adversities Due to a diverse set of survival challenges facing our ancestors natural selection often favored short term solutions which by consequence muted the motivations associated with longer range sustainability values Managerial decisions and choices mostly adopt a moral calculus of costs versus benefits Managers invoke economic and corporate growth to justify virtually any action It is this moral calculus underlying corporate behavior that needs critical examination and reformation At the heart of it lie deep moral questions that we examine in this book with the goal of proposing ethical solutions to the paradox Management and the Sustainability Paradox examines the issue that there appears to be an inherent paradox between what some businesses view as a need for progress and a concern for sustainability In business we often see a collision between ideas of progress and sustainability which shapes corporate actions and managerial decisions Typical corporate views of progress involve the creation of wealth jobs innovative products and social philanthropic projects On the basis of these progressive actions they justify their inequitable distribution of surpluses by paying low wages and exploiting ecological resources It is not difficult to see the antagonistic interplay between technological and social innovation with our values for social and environmental well being and a dualism that needs to be overcome This book is intended for a broad appeal to an academic and policy maker audience in the sustainability and management fields The book will be of vital reading for managers seeking to reconnect our human chain with the natural environment in the cause of sustainable business
