**Graded Logic** Jozo Dujmović, 2025-09-19 Observable human commonsense reasoning can be modeled with graded propositional logic Our approach is distinctive in that all mathematical models are directly linked to specific observable and explainable mental activities Decision makers evaluate alternatives through perceived gradations of truth importance suitability simultaneity and substitutability Each graded variable has a semantic identity reflecting its role and meaning tied to the goals and interests of a specific decision maker Graded logic was introduced 50 years ago and this book presents its current status based on a half century of improvements and applications The book includes examples of decision problems solved using graded logic models Our aim is to provide readers with a solid theoretical foundation in graded propositional calculus enabling them to confidently apply the LSP method on complex evaluation and decision problems Additionally the book suggests numerous directions for future research and applications

**Handbook of Computability and Complexity in Analysis** Vasco Brattka, Peter Hertling, 2021-06-04 Computable analysis is the modern theory of computability and complexity in analysis that arose out of Turing's seminal work in the 1930s This was motivated by questions such as which real numbers and real number functions are computable and which mathematical tasks in analysis can be solved by algorithmic means Nowadays this theory has many different facets that embrace topics from computability theory algorithmic randomness computational complexity dynamical systems fractals and analog computers up to logic descriptive set theory constructivism and reverse mathematics In recent decades computable analysis has invaded many branches of analysis and researchers have studied computability and complexity questions arising from real and complex analysis functional analysis and the theory of differential equations up to geometric measure theory and topology This handbook represents the first coherent cross section through most active research topics on the more theoretical side of the field It contains 11 chapters grouped into parts on computability in analysis complexity dynamics and randomness and constructivity logic and descriptive complexity All chapters are written by leading experts working at the cutting edge of the respective topic Researchers and graduate students in the areas of theoretical computer science and mathematical logic will find systematic introductions into many branches of computable analysis and a wealth of information and references that will help them to navigate the modern research literature in this field

**Document Retrieval Index**, 1976 **CSL '87** Egon Börger, Hans Kleine Büning, Michael M. Richter, 1988-09-14 This volume contains the papers which were presented to the workshop Computer Science Logic held in Karlsruhe on October 12-16 1987 Traditionally Logic or more specifically Mathematical Logic splits into several subareas Set Theory Proof Theory Recursion Theory and Model Theory In addition there is what sometimes is called Philosophical Logic which deals with topics like nonclassical logics and which for historical reasons has been developed mainly at philosophical departments rather than at mathematics institutions Today Computer Science challenges Logic in a new way The theoretical analysis of problems in Computer Science for intrinsic reasons has pointed back to Logic A broad class of questions became visible which is of a basically logical nature These questions are often related to some of the traditional disciplines of Logic but normally without being covered adequately by any of them

The novel and unifying aspect of this new branch of Logic is the algorithmic point of view which is based on experiences people had with computers The aim of the Computer Science Logic workshop and of this volume is to represent the richness of research activities in this field in the German speaking countries and to point to their underlying general logical principles
