Philippe Cullet, Lovleen Bhullar, Sujith Koonan, 2024-07-12 Environmental law is a broad discipline covering issues such as nature conservation the prevention or abatement of pollution and waste management It also encompasses concerns related to natural resources such as forests minerals and fisheries and the balance between their use and conservation India has been at the forefront of jurisprudential developments among countries with similar environmental geographical socio

economic and cultural conditions Concurrently the country has been receptive to ideas and principles arising from other parts of the world or from international law The growth of environmental and natural resources law in India has been sustained in equal measure by growing environmental awareness and the increasingly dire nature of the problems associated with the environment and natural resources ranging from local issues to the global climate crisis At the same time the continuous push for development has not abated leading to recurrent pressure to weaken existing standards for environmental protection and the management and use of natural resources The Oxford Handbook of Environmental and Natural Resources Law in India offers the most comprehensive coverage of the diverse and complex discipline of environmental and natural resources law in India over the past fifty years With forty two contributions from law and non law scholars the Handbook presents diverse perspectives on several areas including biodiversity climate change water forests agriculture health resource extraction and industrial development By departing from the existing approach that examines natural resources law and environmental law separately The Oxford Handbook of Environmental and Natural Resources Law in India offers a much needed integrated analysis of the development of domestic jurisprudence vis vis the environment and natural resources

**Genetic Engineering for Nitrogen Fixation** Alexander Hollaender, 2012-12-06 There is a time in scientific research when a number of developments coincide making it possible to progress with a tough and complicated problem It is believed that such a time has come in the area of biological nitrogen fixation A better understanding of photosynthesis cell hybridization plasmid and gene transfer between cells not necessarily genetically related have opened new avenues of research New developments in traditional genetics cell biology biochemistry including enzyme chemistry and plant physiology have brought about the feeling this is a most appropriate time to pull together the different approaches in a conference where the lines of research could be discussed and thus help to speed up developments in this area What makes biological nitrogen fixation especially important is the promise that a good understanding of the basic problem would help us to make organisms more amenable to fix nitrogen not only in symbiosis with legumes but also with other plant species and develop a wider variety of organisms with the ability to fix N It will also encourage a search for naturally occurring N<sub>2</sub> fixing organisms other than the traditional N<sub>2</sub> fixers Some success has already been encountered in this area Success in broadening the field of nitrogen fixing would help to increase food supply especially in developing countries which cannot afford to purchase synthetic nitrogen sources
