This Technical Bulletin relates to the application of correct engine oil types in Rotary engines.

Synthetic oils or blends are prohibited in all Mazda rotary engines including Renesis in RX-8.
Only mineral oils must be used.

All Pre-Renesis engines (i.e. in vehicles other than RX-8) have a set of internal rubber o-ring seals (refer diagram below), which are designed to keep the oil from the lubrication system out of the combustion chambers. Synthetic oils (or synthetic/mineral blends) can attack the material in the o-rings, causing them to break down and deteriorate. This may lead to high oil consumption, smoke from the exhaust, fouled spark plugs and reduced engine life.

Renesis Engines (i.e. in RX-8): Using synthetic oils in these engines can cause undesirable carbon deposits to accumulate in the inlet ports within the engine, adversely affecting engine operation.
