Robots, Drones, UAVs and UGVs for Operation and Maintenance Diego Galar, Uday Kumar, Dammika Seneviratne, 2020-05-07 Industrial assets such as railway lines roads pipelines are usually huge span long distances and can be divided into clusters or segments that provide different levels of functionality subject to different loads degradations and environmental conditions and their efficient management is necessary The aim of the book is to give comprehensive understanding about the use of autonomous vehicles context of robotics for the utilization of inspection and maintenance activities in industrial asset management in different accessibility and hazard levels The usability of deploying inspection vehicles in an autonomous manner is explained with the emphasis on integrating the total process Key Features Aims for solutions for maintenance and inspection problems provided by robotics drones unmanned air vehicles and unmanned ground vehicles Discusses integration of autonomous vehicles for inspection and maintenance of industrial assets Covers the industrial approach to inspection needs and presents what is needed from the infrastructure end Presents the requirements for robot designers to design an autonomous inspection and maintenance system Includes practical case studies from industries *Selected papers from the 2nd International Symposium on UAVs, Reno, U.S.A. June 8-10, 2009* Kimon P. Valavanis, Randal Beard, Paul Oh, Aníbal Ollero, Leslie A. Piegl, Hayong Shin, 2011-04-11 In the last decade significant changes have occurred in the field of vehicle motion planning and for UAVs in particular UAV motion planning is especially difficult due to several complexities not considered by earlier planning strategies the increased importance of differential constraints atmospheric turbulence which makes it impossible to follow a pre computed plan precisely uncertainty in the vehicle state and limited knowledge about the environment due to limited sensor capabilities These differences have motivated the increased use of feedback and other control engineering techniques for motion planning The lack of exact algorithms for these problems and difficulty inherent in characterizing approximation algorithms makes it impractical to determine algorithm time complexity completeness and even soundness This gap has not yet been addressed by statistical characterization of experimental performance of algorithms and benchmarking Because of this overall lack of knowledge it is difficult to design a guidance system let alone choose the algorithm Throughout this paper we keep in mind some of the general characteristics and requirements pertaining to UAVs A UAV is typically modeled as having velocity and acceleration constraints and potentially the higher order differential constraints associated with the equations of motion and the objective is to guide the vehicle towards a goal through an obstacle field A UAV guidance problem is typically characterized by a three dimensional problem space limited information about the environment on board sensors with limited range speed and acceleration constraints and uncertainty in vehicle state and sensor data *Springer Handbook of Automation* Shimon Y. Nof, 2009-07-16 Automation is undergoing a major transformation in scope and dimension and plays an increasingly important role in the global economy and in our daily lives Engineers combine automated devices with mathematical and

organizational tools to create complex systems for a rapidly expanding range of applications and human activities This handbook incorporates these new developments and presents a widespread and well structured conglomeration of new emerging application areas of automation Besides manufacturing as a primary application of automation the handbook contains new application areas such as medical systems and health transportation security and maintenance service construction and retail as well as production or logistics This Springer Handbook is not only an ideal resource for automation experts but also for people new to this expanding field such as engineers medical doctors computer scientists designers It is edited by an internationally renowned and experienced expert

Sigaud,Olivier Buffet,2013-03-04 Markov Decision Processes MDPs are a mathematical framework for modeling sequential
decision problems under uncertainty as well as reinforcement learning problems Written by experts in the field this book
provides a global view of current research using MDPs in artificial intelligence It starts with an introductory presentation of
the fundamental aspects of MDPs planning in MDPs reinforcement learning partially observable MDPs Markov games and
the use of non classical criteria It then presents more advanced research trends in the field and gives some concrete
examples using illustrative real life applications **In-Flight Simulators and Fly-by-Wire/Light Demonstrators** Peter G.
Hamel,2017-03-15 This book offers the first complete account of more than sixty years of international research on In Flight
Simulation and related development of electronic and electro optic flight control system technologies Fly by Wire and Fly by
Light They have provided a versatile and experimental procedure that is of particular importance for verification optimization
and evaluation of flying qualities and flight safety of manned or unmanned aircraft systems Extensive coverage is given in the
book to both fundamental information related to flight testing and state of the art advances in the design and implementation
of electronic and electro optic flight control systems which have made In Flight Simulation possible Written by experts the
respective chapters clearly show the interdependence between various aeronautical disciplines and in flight simulation
methods Taken together they form a truly multidisciplinary book that addresses the needs of not just flight test engi neers
but also other aeronautical scientists engineers and project managers and historians as well Students with a general interest
in aeronautics as well as researchers in countries with growing aeronautical ambitions will also find the book useful The
omission of mathematical equations and in depth theoretical discussions in favor of fresh discussions on innovative
experiments together with the inclusion of anecdotes and fascinating photos make this book not only an enjoyable read but
also an important incentive to future research The book translated from the German by Ravindra Jategaonkar is an extended
