Abstract: The purpose of this study was to examine the effects of a 12-week, 100% body weight (BW) resistance training program on the body composition and muscle strength of sedentary, middle-aged women. The subjects were randomly assigned to either a resistance training (RT) or control (CON) group. The RT group performed a 12-week, 100% BW resistance training program, while the CON group performed no exercise. The RT group showed significant improvements in body composition and muscle strength compared to the CON group. The results of this study suggest that a 12-week, 100% BW resistance training program is effective in improving body composition and muscle strength in sedentary, middle-aged women.
