Science & Emotions after 1945 Frank Biess,Daniel M. Gross,2014-05-22 Through the first half of the twentieth century emotions were a legitimate object of scientific study across a variety of disciplines After 1945 however in the wake of Nazi irrationalism

emotions became increasingly marginalized and postwar rationalism took central stage. Emotion remained on the scene of scientific and popular study but largely at the fringes as a behavioral reflex or as a concern of the private sphere. So why by the 1960s had the study of emotions returned to the forefront of academic investigation? In *Science and Emotions* after 1945, Frank Biess and Daniel M. Gross chronicle the curious resurgence of emotion studies and show that it was fueled by two very different sources: social movements of the 1960s and brain science. A central claim of the book is that the relatively recent neuroscientific study of emotion did not initiate but instead consolidated the emotional turn by clearing the ground for multidisciplinary work on the emotions. *Science and Emotions* after 1945 tells the story of this shift by looking closely at scientific disciplines in which the study of emotions has featured prominently, including medicine, psychiatry, neuroscience, and the social sciences, viewed in each case from a humanities perspective.

Handbook of Systemic Approaches to Psychotherapy Manuals Mauro Mariotti, George Saba, Peter Stratton, 2022-02-17 This handbook examines the development and use of manuals to guide and support systemic couples and family therapies. It addresses the process of manualizing, providing a secure base for therapist creativity rather than delineating prescriptive procedures. The volume addresses therapist and trainer concerns by demonstrating the value of sufficiently articulating clinical and teaching models to inform colleagues of what actually occurs during therapy. The book describes the history, value, and controversies of manuals. In addition, it explores issues and experiences in the creation of manuals, identifies research issues related to the use and evaluation of manuals, and addresses training as a context for the application of treatment manuals. Key areas of coverage include: Reports of experiences with major internationally established manuals; formulations of innovative practices by their developers and specifications of training programs; Discussion of the various formats of manuals demonstrating their benefit and transportability across different contexts; Surveys of a broad selection of manuals creating a flexible and diversified concept of what forms manuals may take; Essential guidance for using manuals, which is an indispensable step for the field to progress and to claim to health resource commissioning governments and insurance agencies that the systemic practice is evidence based and effective. The *Handbook of Systemic Approaches to Psychotherapy Manuals* is an essential resource for researchers, professors, and graduate students as well as clinicians and related therapists and professionals in clinical psychology, family studies, public health, social work, psychotherapy, child and adolescent psychology, and all interrelated disciplines.

Mental and Occupational Stress Assessment of Pink Collar Workers Suchismita Satapathy, Arturo Realyvásquez Vargas, Meghana Mishra, 2024-12-29 This book delves into the mental and occupational stress of pink collar workers. A pink collar worker is a person employed in a care-related profession or in an area that has traditionally been seen as the domain of women. Examples include jobs in the beauty business, nursing, social work, education, teaching, secretarial work, upholstery, or child care. To help with the financial burdens of their family, pink collar workers engage in their job for at least 8 to 10 hours a day, which often leads to sacrificing their

time with their family. Additionally, pink collar workers face many barriers like emotional labor e.g. dealing with patients or clients, workload, interpersonal conflicts, and job insecurity. This book endeavors to study the physical stressors and mental stress of pink collar workers so that new policies can be framed or suggested for the wellness of pink collar workers.
