Geometry Hs Mathematics Tesccc Circles:

Circles Daniel Pedoe,1995 Illuminates the fundamental aspects of geometry where the circle plays an important role

The Circle Alfred S. Posamentier,Robert Geretschläger,2016 The circle has fascinated mathematicians since ancient times This entertaining book describes in layperson s terms the many intriguing properties of this fundamental shape If math has intimidated you this may be the ideal book to help you appreciate the discipline through one of its most important elements The authors begin with a brief review of the basic properties of the circle and related figures They then show the many ways in which the circle manifests itself in the field of geometry leading to some amazing relationships and truly important geometric theorems In addition they explore remarkable circle constructions and demonstrate how all constructions in geometry that usually require an unmarked straightedge and a compass can also be done with the compass alone Among other things the reader will learn that circles can generate some unusual curves many even quite artistic Finally the role of circles in art and architecture and a discussion of the circle s place on the sphere bring full circle this presentation of a key element of geometry

The Geometry of Remarkable Elements Constantin Mihalescu,2016 This book is an English translation of a text written by Constantin Mihalescu a retired artillery colonel and enthusiastic amateur mathematician With the majority of the results obtained in the second half of the 19th century and the first half of the 20th century this book was one of the most complete descriptions of geometry of its time It contains a comprehensive collection of the most important properties of points lines and circles related to triangles and quadrilaterals as they were known by the mid 1950s and a rich assortment of problems to entice and inspire readers of all levels Topics covered include the nine point circle the Simson line the orthopolar triangles the orthopole the Gergonne and Nagel points the Miquel point and circle the Carnot circle the Brocard points the Lemoine point and circles the Newton Gauss line and much more
