Online and Offline Modulators of Motor Learning Shahabeddin Vahdat, Ovidiu Lungu, Bradley King, Geneviève Albouy, Julien Doyon, 2017-05-25 Both the acquisition of new and the modification of previously acquired motor skills are necessary to achieve optimal levels of motor performance in everyday functioning as well as to attain expert performance levels that are evident in sports and arts. A multitude of factors have been shown to influence the various stages of the learning process from the acquisition i.e. motor memory encoding to the consolidation and subsequent retention of a skill. These factors or modulators can affect learning through online processes taking place during practice of a new motor skill or through offline processes occurring in the absence of task performance i.e. after training sessions. Although much of the recent research from various disciplines has placed an increased emphasis on identifying factors that can influence the motor learning process, we lack an integrated understanding of online and offline determinants of motor skill behaviours. Potential motor learning modulators include but are certainly not limited to stress, anxiety, attention, executive functioning, social interaction, stimulus response mapping, training schedule, regimen, learning environment, vigilance, consciousness states including sleep, wakefulness or meditation, brain stimulation interference as well as resting state brain connectivity. Pathological and non pathological i.e. development or aging changes in the brain can also be conceptualized as potential modulators. The aim of this Research Topic is to bridge research from the cognitive, sensory, motor and psychological domains using various behavioural paradigms and neuroimaging techniques in order to provide a comprehensive view of the online and offline modulators of motor learning and how they interact to influence motor performance. Critically, the overarching goal is to gain a better understanding of how motor behaviour can be optimized. We believe that merging research from diverse neuroscientific communities would contribute to fulfilling this goal and potentially highlight possible shared neurophysiological mechanisms influencing motor learning.

Improving Learning through the Lifecourse Gert Biesta, John Field, Phil Hodgkinson, Flora J. Macleod, Ivor F. Goodson, 2011-02-25 Adult learning matters. There is now widespread agreement that

modern countries depend on the creativity skills and knowledge of the entire population for their prosperity. Many people talk of our future well being in terms of a knowledge economy or a learning society in which every person's ability to develop new capabilities will provide them with resources that will help them and the wider community to adapt and thrive. While in theory this makes lifelong learning into an exciting prospect, in practice this broad agenda is often reduced to a narrowly economic conception. This book reports on one of the largest research projects into lifelong learning conducted in recent years. Through over 500 in depth interviews with a cohort of about 120 adults who were followed for three years, the Learning Lives project has built up a detailed understanding of what learning means and does in the lives of adults. The project has generated insights in how learning has changed over time and across generations, what the connections are with the changing world of work, what differences learning makes for life chances, how we can learn from life and for life, and how people's prospects of learning can be improved. Combining life history and life course research with analysis of longitudinal survey data, this book provides important insights into the learning biographies and trajectories of adults. The book shows that learning means and does much more in people's lives than is often acknowledged by current education policy and politics. In doing so, it is an invaluable resource for anyone with an interest in the role and potential of learning through the lifecourse.

Formative Design in Learning Brad Hokanson, Matthew Schmidt, Marisa E. Exter, Andrew A. Tawfik, Yvonne Earnshaw, 2023-11-27. Learning design is an ill structured process that must account for multiple stakeholders, contextual constraints, and other instructional needs. Whereas many theories outline learning theories, less is known about the formative design process and how it impacts the design and development of learning technologies. This is critical because a formative view considers the issues that educators encounter and how to overcome them during the learning design process. This edited volume provides a multi faceted look at theories, studies, and design cases that employ formative design in learning across multiple domains. Topics include processes oriented around design thinking, design based research, and others. Additional chapters provide contextual considerations such as describing how formative design was used to design learning solutions for STEM learning and food banks, as well as overcoming challenges in emergency remote teaching. In doing so, the book provides an interdisciplinary view that explores how scholars and practitioners engage in formative practices that support a wide array of learners and contexts.
