Smoke Alarm Advantages

Fire protection type alarms are generally more effective at detecting fire, warning you when a fire starts, and alerting you to evacuate your home. Alarms of most types include thermate (heat) or ionization (smoke) sensors. The photoelectric type alarm are generally more effective at detecting fires, including fires that smolder for hours before burning into flames. Sensors of these two types include separate ionization detectors or smoking sensors. Both types of alarm are designed to provide adequate detection of both types of fires. If you have the ionization smoke system, you should install smoke alarm that contains an ionization (OI) photoelectric and ionization sensing technology.
