#### ■ At Idling

When speed control lever (1) is set at idling position after the engine is started, high speed governor spring 1 (2) does not work at all and also low speed governor spring 2 (3) does only a little action. Therefore, governor sleeve (5) is pushed leftward by a centrifugal force of ball weights. Fork lever 1 and control rack are moved leftward by the sleeve and then idling limit spring (8) is compressed by control rack. As a result, the control rack is kept at a position where a centrifugal force of ball weights and forces start spring, governor spring 2 and idling limit spring are balanced, providing stable idling.
