Delivering Value with BIM Adriana Sanchez, Keith Hampson, Simon Vaux, 2016-03-31 Building Information Modelling BIM is a global phenomenon which is gaining significant momentum across the world. Currently there is little information on how to realise and monitor benefits from implementing BIM across the life cycle of a built environment asset. This book provides a practical and strategic framework to realise value from implementing BIM by adapting Benefit Realisation Management theory. It presents an approach for practitioners aiming to implement BIM across the life cycle of built environment assets including both buildings and infrastructure. Additionally, the book features wide ranging information about BIM, the challenges of monitoring progress towards benefit goals and the greater context of implementation, a set of dictionaries that illustrate how benefits can be achieved, what the benefit flows are and the enabling tools and processes that contribute to achieving and maximising them, a suite of measures that can serve to monitor progress with examples of how they have been used to measure benefits from BIM, real world examples from across the world and life cycle phases that show how these benefits can be achieved and information on international maturity and competency measures to complement the value realisation framework. Including a blend of academic and industry input, this book has been developed in close collaborative consultation with industry, government and international research organisations and could be used for industry courses on BIM benefits and implementation for asset management or by universities that teach BIM related courses.

Earthquake Disaster Simulation of Civil Infrastructures Xinzheng Lu, Hong Guan, 2021-02-01. The first edition of this monograph presenting accurate and efficient simulations of seismic damage to buildings and cities has received significant attention from the research community. To keep abreast of the rapid development in recent years, our latest breakthrough achievements have been added to this new edition, including novel resilient structural components, secondary disaster simulations, emergency responses and resilient recovery of communities after earthquake. This edition comprehensively covers a range of numerical modeling approaches, higher performance computation methods and high fidelity visualization techniques for earthquake disaster simulation of tall buildings and urban areas. It also demonstrates successful engineering

applications of the proposed methodologies to typical landmark projects e.g. Shanghai Tower and CITIC Tower two of the world's tallest buildings Beijing CBD and San Francisco Bay Area. Reported in this edition are a collection of about 60 high impact journal publications which have already received high citations.

Structures and Architecture
Paulo J. Cruz, 2016-10-14. Although the disciplines of architecture and structural engineering have both experienced their own historical development, their interaction has resulted in many fascinating and delightful structures. To take this interaction to a higher level, there is a need to stimulate the inventive and creative design of architectural structures and to persuade architects and structural engineers to further collaborate in this process, exploiting together new concepts, applications and challenges. This set of book of abstracts and full paper searchable CD-ROM presents selected papers presented at the 3rd International Conference on Structures and Architecture Conference ICSA2016 organized by the School of Architecture of the University of Minho, Guimarães, Portugal, July 2016, to promote the synergy in the collaboration between the disciplines of architecture and structural engineering.

Structures and Architecture. A Viable Urban Perspective? Marie Frier Hvejsel, Paulo J.S. Cruz, 2022-07-07. Structures and Architecture: A Viable Urban Perspective contains extended abstracts of the research papers and prototype submissions presented at the Fifth International Conference on Structures and Architecture ICSA2022 Aalborg, Denmark, 6-8 July 2022. The book 578 pages also includes a USB with the full texts of the papers 1448 pages. The contributions on creative and scientific aspects in the conception and construction of structures as architecture and on the role of advanced digital industrial and craft-based technologies in this matter represent a critical blend of scientific, technical and practical novelties in both fields. Hence, as part of the proceedings series Structures and Architecture, the volume adds to a continuous exploration and development of the synergetic potentials of the fields of Structures and Architecture. With each volume further challenging the conditions, problems and potentials related to the art, practice and theory of teaching, researching, designing and building structures as vehicles towards a viable architecture of the urban environment. The volumes of the series appear once every three years in tandem with the conferences organized by the International Association of Structures and Architecture and are intended for a global readership of researchers, practitioners and students including architects, structural and construction engineers, builders and building consultants, constructors, material suppliers, planners, urban designers, anthropologists, economists, sociologists, artists, product

manufacturers and other professionals involved in the design and realization of architectural structural and infrastructural projects
