

WEATHER AND WATER

ACTIVITIES AND WORKSHEETS

Why do we see clouds in the sky?

Clouds are made of tiny water droplets or ice crystals that form when water vapor in the air cools down. These droplets group together and float in the sky. Clouds can look white and fluffy or gray and heavy, depending on how much water they hold.

When does water turn into ice?

Water turns into ice when it gets very cold. The water molecules slow down and stick together, forming solid ice. This happens in the winter in cold climates.

Why is water important for life?

Water is important because it moves through the water cycle, creating rain, snow, and ice. Water in the air helps form clouds and keeps our planet cool. Without water, life as we know it wouldn't exist.

What is wind?

Wind is moving air. It happens because the sun heats some parts of the Earth more than others. The warm air rises, and cool air moves in to take its place, creating wind. Wind can be gentle like a breeze or strong like a storm.
