

Lesson 3.1 -- Using and Interpreting Function Notation

Graphing

can represent an equation that has one input and one output

one input is the **x** value

one output is the **y** value

Interpreting a function written using the mapping notation

$f(x)$ means the output value when the input is x .

Graphing function notation

the domain and the range of the function are the **x** and **y** values

Check Your Understanding

1. A graph of $y = f(x)$ is shown below.

a. What is $f(2)$? **2**

b. What is $f(3)$? **3**

c. What is a function value of f ?

$x > 0$ then $f(x) > 0$

2. Use this graph to answer the number of people in the area 1000 feet from a house after the house built again. Interpret each of the following statements in context.

a. $1000 < 10$

the house after the first house built again, 10 people are in the area

b. $1000 < 1000$

the house after the first house built again, 1000 people are in the area

3. Engineers have discovered that there is a pattern, or rule, that can determine the heading distance a car travels in the car's speed when the car's speed, s , and time, t , double the result by 10.

a. Use this rule to predict the heading distance of a car traveling 10 mph.

100 ft

b. Write an equation for this that represents the car's heading distance when driving at a speed of s miles per hour.

$f(s) = \frac{10}{s}$

c. $1000 < 1000$

the house after the first house built again, 1000 people are in the area

d. $1000 < 10$

the house after the first house built again, 10 people are in the area

Teaching and Learning High School Mathematics Charlene E. Beckmann, Denisse R. Thompson, Rheta N.

Rubenstein, 2009-11-02 Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their college and career options Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics content and mathematics pedagogy i e teaching strategies but they also need to know how these ideas are integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many other texts that you have used It integrates both content and pedagogy to help you develop and build your own understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career Hopefully you will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1 1 and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and learning elements and strategies and incorporate these elements as they plan additional lesson segments In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans

Johnson,2021-09-23 Spark the visual learning of students in grades 2 4 with Spatial Reasoning a mathematics unit for high ability learners Gifted students demonstrate an advanced aptitude for spatial reasoning at early ages and they require more complex lessons than what the standard curriculum provides This field tested unit approaches spatial reasoning through one dimensional 1 D two dimensional 2 D and three dimensional 3 D tasks that will engage students The lessons in this unit are differentiated for gifted learners and they are supported by hands on extension activities that extend spatial concepts beyond the classroom The skills learned throughout this unit will lay the foundation of spatial reasoning that will prepare students for middle school and beyond Spatial Reasoning was developed by the Center for Gifted Education at The College of William and Mary Grades 2 4 **Math Wars** Carmen Latterell,2004-12-30 This book is written

for parents and other interested parties so that they can understand the great debate taking place in many states in this country about how to teach basic math. The debate centers around the standards written by the National Council of Teachers of Mathematics (NCTM) which call for a radically different approach to mathematics education. Because the issues are so heated between the NCTM oriented curricula and traditional curricula, the curricula that NCTM oriented replaced the term Math Wars was coined to describe them. Parents are concerned about their children's math learning. Teachers are concerned about math teaching. When parents see what children are bringing home under the new curriculum, it is clear that their children are not working on the same mathematics that parents remember from the time when they were in school. But the problem goes beyond grades K-12. Post-secondary mathematics courses are the fear of many students. The standards created by the NCTM do not necessarily prepare students for success either on SATs or in college. Besides lack of knowledge about mathematics education, many parents have an additional problem in that they feel they lack knowledge in mathematics itself. This is very intimidating, thus it is difficult for parents to do anything about the confusing state of mathematics education. This book provides some answers.

Moving Through Dimensions Clg Of William And Mary/Ctr Gift Ed, 2021-09-03

Moving Through Dimensions approaches spatial reasoning through one dimensional, two dimensional and three dimensional tasks designed for students in the middle school grades. The unit also asks students to explore the transition between dimensions and representations of three dimensional objects in two dimensions. This book includes pre and postassessments, multiple reproducible materials and lessons based on NCTM standards. Moving Through Dimensions was developed by the Center for Gifted Education at The College of William and Mary to offer advanced curriculum supported by years of research. The Center's materials have received national recognition from the United States Department of Education and the National Association for Gifted Children and they are widely used both nationally and internationally. Each of the books in this series offers curriculum that focuses on advanced content and higher level processes. The science units contain simulations of real world problems and students experience the work of real science by using data handling skills, analyzing information and evaluating results. The mathematics units provide sophisticated ideas and concepts, challenging extensions, higher order thinking skills and opportunities for student exploration based on interest. These materials are a must for any teacher seeking to challenge and engage learners and increase achievement. Grades 6-8.
