CHAPTER 4

CLAY MINERALS, SOIL AND ROCK STRUCTURES, AND ROCK CLASSIFICATION

4-1. Calculate the specific surface of a cube (a) 10 mm, (b) 1 mm, (c) and (d) 1 nm on a side. Calculate the specific surface in terms of both area and m^2/kg . Assume for the latter case that $\rho_s = 2.65 \text{ Mg/m}^3$.

SOLUTION:

Solve using Eq. 4.2: specific surface = $\frac{\text{surface area}}{\text{unit volume}}$

$$(a) \text{ specific surface} = \frac{6(100 \text{ mm}^2)}{10 \text{ mm}^3} = 60 \frac{\text{mm}^2}{\text{mm}^3}$$

$$\text{and specific surface} = \frac{(60 \frac{\text{mm}^2}{\text{mm}^3}) \times 1000 \frac{\text{mm}^3}{\text{m}^3}}{2.65 \frac{\text{Mg}}{\text{m}^3}} = 22,641 \frac{\text{m}^2}{\text{Mg}} = 22.6 \frac{\text{m}^2}{\text{kg}}$$

$$(b) \text{ specific surface} = \frac{6(1 \text{ mm}^2)}{1 \text{ mm}^3} = 6 \frac{\text{mm}^2}{\text{mm}^3}$$

$$\text{and specific surface} = \frac{(6 \frac{\text{mm}^2}{\text{mm}^3}) \times 1000 \frac{\text{mm}^3}{\text{m}^3}}{2.65 \frac{\text{Mg}}{\text{m}^3}} = 2264 \frac{\text{m}^2}{\text{Mg}} = 2.26 \frac{\text{m}^2}{\text{kg}}$$

$$(c) \text{ specific surface} = \frac{6(1 \mu\text{m}^2)}{1 \mu\text{m}^3} = 6 \frac{\mu\text{m}^2}{\mu\text{m}^3} = 6000 \frac{\text{mm}^2}{\text{mm}^3}$$

$$\text{and specific surface} = \frac{(6000 \frac{\text{mm}^2}{\text{mm}^3}) \times 1000 \frac{\text{mm}^3}{\text{m}^3}}{2.65 \frac{\text{Mg}}{\text{m}^3}} = 2,264,151 \frac{\text{m}^2}{\text{Mg}} = 2264 \frac{\text{m}^2}{\text{kg}}$$

$$(d) \text{ specific surface} = \frac{6(1 \text{ nm}^2)}{1 \text{ nm}^3} = 6 \frac{\text{nm}^2}{\text{nm}^3} = 6,000,000 \frac{\text{mm}^2}{\text{mm}^3}$$

An Introduction to Geotechnical Engineering Robert D. Holtz, William D. Kovacs, 1981 A descriptive elementary introduction to geotechnical engineering with applications to civil engineering practice focuses on the engineering classification behavior and properties of soils necessary for the design and construction of foundations and earth structures introduces vibratory and dynamic compaction the method of fragments the Schmertmann procedure for determining field compressibility secondary compression liquefaction and an extensive use of the stress path method

Sustainable Buildings and Infrastructure Annie R. Pearce, Yong Han Ahn, Ltd HanmiGlobal Co, 2017-12-14 The second edition of *Sustainable Buildings and Infrastructure* continues to provide students with an introduction to the principles and practices of sustainability as they apply to the construction sector including both buildings and infrastructure systems As a textbook it is aimed at students taking courses in construction management and the built environment but it is also designed to be a useful reference for practitioners involved in implementing sustainability in their projects or firms Case

studies best practices and highlights of cutting edge research are included throughout making the book both a core reference and a practical guide

Geosynthetic Reinforced Soil (GRS) Walls Jonathan T. H. Wu, 2019-05-03 The first book to provide a detailed overview of Geosynthetic Reinforced Soil Walls Geosynthetic Reinforced Soil GRS Walls deploy horizontal layers of closely spaced tensile inclusion in the fill material to achieve stability of a soil mass GRS walls are more adaptable to different environmental conditions more economical and offer high performance in a wide range of transportation infrastructure applications This book addresses both GRS and GMSE with a much stronger emphasis on the former For completeness it begins with a review of shear strength of soils and classical earth pressure theories It then goes on to examine the use of geosynthetics as reinforcement and followed by the load deformation behavior of GRS mass as a soil geosynthetic composite reinforcing mechanisms of GRS and GRS walls with different types of facing Finally the book finishes by covering design concepts with design examples for different loading and geometric conditions and the construction of GRS walls including typical construction procedures and general construction guidelines The number of GRS walls and abutments built to date is relatively low due to lack of understanding of GRS While failure rate of GMSE has been estimated to be around 5% failure of GRS has been found to be practically nil with studies suggesting many advantages including a smaller susceptibility to long term creep and stronger resistance to seismic loads when well compacted granular fill is employed Geosynthetic Reinforced Soil GRS Walls will serve as an excellent guide or reference for wall projects such as transportation infrastructure including roadways bridges retaining walls and earth slopes that are in dire need of repair and replacement in the U S and abroad Covers both GRS and GMSE MSE with geosynthetics as reinforcement with much greater emphasis on GRS walls Showcases reinforcing mechanisms engineering behavior and design concepts of GRS and includes many step by step design examples Features information on typical construction procedures and general construction guidelines Includes hundreds of line drawings and photos Geosynthetic Reinforced Soil GRS Walls is an important book for practicing geotechnical engineers and structural engineers as well as for advanced students of civil structural and geotechnical engineering

Geological Hazards in the UK D.P. Giles, J.S. Griffiths, 2020-06-09 The UK is perhaps unique globally in that it presents the full spectrum of geological time stratigraphy and associated lithologies within its boundaries With this wide range of geological assemblages comes a wide range of geological hazards whether they be geophysical earthquakes effects of volcanic eruptions tsunami landslides geotechnical collapsible compressible liquefiable shearing swelling and shrinking soils

geochemical dissolution radon and methane gas hazards or georesource related coal chalk and other mineral extraction An awareness of these hazards and the risks that they pose is a key requirement of the engineering geologist The Geological Society considered that a Working Party Report would help to put the study and assessment of geohazards into the wider social context helping the engineering geologist to better communicate the issues concerning geohazards in the UK to the client and the public This volume sets out to define and explain these geohazards to detail their detection monitoring and management and to provide a basis for further research and understanding Lateral Deflection Contribution to Settlement Estimates Dante Fratta,2014 A Manual of Field Hydrogeology Laura L. Sanders,1998 Designed to bridge the gap between books on the theoretical principles of hydrogeology that define but don t describe actual practices and professional applications oriented publications This field oriented book manual provides background information on the WHYs of field work as well as step by step procedures for the WHATs and HOWs of specific field tests It provides readers who already have a basic familiarity with introductory hydrogeology with hands on practice in actual hydrogeologic field methods and activities

Single Piles in Liquefiable Ground Rui Wang,2016-03-17 This thesis focuses on the seismic response of piles in liquefiable ground It describes the design of a three dimensional unified plasticity model for large post liquefaction shear deformation of sand formulated and implemented for parallel computing It also presents a three dimensional dynamic finite element analysis method for piles in liquefiable ground developed on the basis of this model Employing a combination of case analysis centrifuge shaking table experiments and numerical simulations using the proposed methods it demonstrates the seismic response patterns of single piles in liquefiable ground These include basic force resistance mode kinematic and inertial interaction coupling mechanism and major influence factors It also discusses a beam on the nonlinear Winkler foundation BNWF solution and a modified neutral plane solution developed and validated using centrifuge experiments for piles in consolidating and reconsolidating ground Lastly it studies axial pile force and settlement during post earthquake reconsolidation showing pile axial force to be irrelevant in the reconsolidation process while settlement is process dependent

Foundation Engineering Handbook Hsai-Yang Fang, 1990-12-31 More than ten years have passed since the first edition was published During that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and sanitary landfills To overcome the problems associated with these natural or man made soil deposits new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction

Sealing of Boreholes and Underground Excavations in Rock K. Fuenkajorn, J.J. Daemen, 2012-12-06 Sealing of boreholes and underground excavations has not received much engineering attention until fairly recently The growing awareness of and sensitivity to environmental concerns of the technical community as well as of the public at large has resulted in an increasing recognition of the fact that these geological penetrations may have an environmental impact The issue of possible contamination resulting from migration along boreholes adits shafts or tunnels unquestionably has been raised most forcefully with in the context of nuclear waste disposal Several nuclear waste disposal programs notably the Civilian and the Defence programs of the US Department of Energy the US Nuclear Regulatory Commission and the Canadian and Swedish radioactive waste disposal programs have conducted major research efforts aimed at developing adequate seal designs for penetrations in host rock formations for high level nuclear waste repositories While a considerable data base has been gathered over the last two decades or so with regard to the performance of seals most of the information is presented in research reports and widely scattered papers in journals and proceedings of conferences Hence the materials

are not readily accessible to potential users such as designers contractors or regulators who are not familiar with nuclear waste disposal programs
