

The Negative Sides of Vaccinations

Many people seem to form their own opinions before they know any facts to back it up, and this also comes into play when dealing with vaccinations. From the long needles to the burning of the medicine going into the veins, vaccines are not only painful but can also be harmful. In a quote from "Quotes From..." it states, "Vaccination is not necessary, not useful, does not protect. There are twice as many casualties from vaccination as from AIDS" (Buchwald 1). When a parent first has a child, many thoughts may come into their minds, and one major question they are asked is if they want their child to be vaccinated or not. The thought may have crossed their mind before, but what if it had not? What if the parents were not aware of what would come along with vaccinations?

Though parents may be advised to have their children vaccinated, that may not always be the best choice. Not only are vaccines not always affective, they also go against many religious beliefs and can have very harmful side effects.

Illnesses and diseases have been around since the beginning of time. Of course, back then, they had nothing to fight these horrible sicknesses, and yet, many people continued to live their normal lives. The book *Vaccination Controversies* says that people are more likely to doubt the effectiveness of vaccines because even if the children are vaccinated for a certain disease, they are still able to become infected with the disease (Newton 146-147). This stands true for many diseases that once swept the population almost completely out, such as smallpox, measles, or even polio.
