Resources in Education, 2000-10 *Science Education* Shamin Padalkar, Mythili Ramchand, Rafikh Shaikh, Indira Vijaysimha, 2022-07-26 The book presents key perspectives on teaching and learning science in India. It offers adaptive expertise to teachers and educators through a pedagogic content knowledge (PCK) approach. Using cases and episodes from Indian science classrooms to contextualise ideas and practices, the volume discusses the nature of science and aspects of assessments and evaluations for both process skills and conceptual understanding of the subject. It examines the significance of science education at school level and focuses on meaningful learning and development of scientific and technological aptitude. The chapters deal with topics from physics, chemistry and biology at the middle and secondary school levels and are designed to equip student teachers with theoretical and practical knowledge, abilities about science learning and the abilities to teach these topics along with teaching. The book draws extensively from research on science education and teacher education and shifts away from knowledge transmission to the active process of constructivist teaching-learning practices. The authors use illustrative examples to highlight flexible planning for inclusive classrooms. Based on studies on cognitive and developmental psychology, pedagogical content knowledge of science, socio-cultural approaches to learning science and the history and philosophy of science, the book promotes an understanding of science characterized by empirical criteria, logical arguments and sceptical reviews. With its accessible style, examples, exercises and additional references, it will be useful for students and teachers of science, science educators, BEd and MEd programmes for education, secondary and higher secondary school teachers, curriculum designers and developers of science. It will interest research institutes, non-governmental organisations, professionals and public and private sector bodies involved in science outreach, science education and teaching and learning practices.

Course and Curriculum Improvement Materials National Science Foundation (U.S.), 1976 *Uncovering Student Ideas in Astronomy* Page Keeley, Cary Ivan Sneider, 2012 What do your students know or think they know about what causes night and day, why days are shorter in winter and how to tell a planet from a star? Find out with this book on astronomy, the latest in NSTA's popular *Uncovering Student Ideas in Science* series. The 45 astronomy probes provide situations that will pique your students' interest while helping you understand how your students think about key ideas related to the universe and how it operates. The book is organized into five sections: the Nature of Planet Earth, the Sun-Earth System, Modeling the Moon, Dynamic Solar System and Stars, Galaxies and the Universe. As the authors note, it's not always easy to help students untangle mistaken ideas. Using this powerful set of tools to identify students' preconceptions is an excellent first step to helping your students achieve scientific understanding.
