The six volume set LNCS 8579 8584 constitutes the refereed proceedings of the 14th International Conference on Computational Science and Its Applications ICCSA 2014 held in Guimarães Portugal in June/July 2014. The 347 revised papers presented in 30 workshops and a special track were carefully reviewed and selected from 1167. The 289 papers presented in the workshops cover various areas in computational science ranging from computational science technologies to specific areas of computational science such as computational geometry and security.

Philosophy of Science for Nursing Practice, Second Edition Michael D. Dahnke, H. Michael

Dreher, 2015-11-04. Written for DNP and PhD nursing programs this text based on a unique team taught philosophy of science nursing courses distills challenging content and delivers it in clear highly accessible language for professors untrained in philosophy and their students. Authored by a nurse researcher philosopher team who developed and taught this course for more than 7 years the book provides a unique integrated viewpoint that avoids esoteric and overly theoretical discussions and facilitates a clear connection between the philosophy of science and nursing science and practice. This second edition offers enhanced clarity and encompasses updates in philosophy of science interpretation nursing practice and science and a still emerging practice epistemology. It is distinguished by its increased emphasis on DNP investigation that relies on a fundamental relationship with evidence based practice as well as the informational needs of the PhD student and the type of research the PhD graduate is expected to produce. The bulk of the text focuses on basic principles and concepts of the philosophy of science in regard to the education of both DNP and PhD nursing students. The book discusses the concept of nursing as a practice discipline within historical and sociological contexts and addresses the importance of philosophy of science knowledge within a practice discipline. It examines the controversial question of how much philosophy of science a doctoral student actually needs. The text concludes with a brief introduction to nursing science knowledge content that is an

essential bridge to the philosophy of science content and serves as a next step toward building a nursing epistemology New to the Second Edition Revised to enhance clarity of information Reflects contemporary trends in doctoral nursing education Updated Questions for Reflection offer scholarly discourse New appendix offers a sample semester based syllabus based on the second edition Key Features Provides concise accessible information that makes clear connections to practical applications Written jointly by a philosopher and a nurse scholar who co teach the course Facilitates student ability to see the real connection between philosophy and practice Increased focused content on how philosophy of science content is essential to understand evidence based and practice based evidence

Autoimmuno-Anti-Tumour Immunity (AATI) - Understanding the Immune Responses against "Self" & "Altered-self" Fang-Ping Huang,2017-05-16 The brief description of tumours being wounds that do not heal by Dr Harold F Dworak nearly three decades ago N Engl J Med 1986 has provided not only a vivid illustration of neoplastic diseases in general but also in retrospect conceptually a plausible immunological definition of cancers Based on our current understanding in the field it could have even a multi dimensional meaning attached with This relates to several important issues which need to be addressed further i e in terms of a close link between chronic inflammation and tumourigenesis widely observed clinical and experimental evidence of immunity against tumours versus the highly immunosuppressive tumour microenvironment being associated and their underlying immunological mechanisms oncogenic basis as well as the true causal relationship in question Recent findings from studies into the pathogenesis of autoimmunity and more importantly the mechanisms which protect against it have offered some new insights for our understanding in this direction Chronic or persistent autoimmune like inflammatory conditions are evidently associated with tumor development The important question is about their true causal relationship Chronic or persistent inflammation has been shown to contribute directly to tumour development by triggering neoplastic transformation and production of inflammatory mediators which could promote cancer cell survival proliferation and invasion On the other hand tumours are mutated self tissue cells to which the host immune system is largely tolerized otherwise Although the mutations may give rise to the expression of tumour specific antigens TSA or tumour

associated antigens TAA most of these TSAs TAAs are found to be poor immunogens The ongoing inflammatory conditions may therefore reflect a desperate attempt of the host immune system to mount anti tumour responses though ineffectively being a consequence of the continuous yet largely futile triggering by those poorly immunogenic TSAs TAAs Furthermore during autoimmune or overtly persistent immunological responses many regulatory mechanisms are triggered in the host in attempts to limit the ongoing harmful inflammatory reactions Such a negative feedback regulation is known to be crucial in preventing normal individuals from immune mediated diseases As a result of the negative feedback loop however an excessive production of anti inflammatory or immunosuppressive molecules followed by the exhaustion of the immune effector cells may instead lower the ability of the host immune system to mount specific anti tumor responses allowing the escape of tumour or mutated cells from immunosurveillance This may also help to explain why the most effective way to enhance host immunity against cancer is by targeting the negative arm of immune regulation In this Frontiers Research Topic we aim to gather current views from experts in these inherent overlapping fields of oncology autoimmunity and tumour immunology and to make them available to our potential readership who may be particularly interested in this cutting edge area By understanding how the immune system is normally regulated why dysregulation of which may cause the immunological oncological related diseases we also encourage further discussions as to how the so called self reactivity autoimmune responses can be alternatively switched on and redirected immunologically or molecularly for effective cancer treatment

Neurophysiology in Alzheimer's Disease and Dementia Davide Vito Moretti,2016-09-06 Alzheimer s disease AD and dementia are the most common neurodegenerative disorder Since the number of individuals with AD and dementia is expected to increase considerably in the near future reliable treatment and diagnosis are critical EEG and neurophysiological technique could be used as a cost effective screening tool for early detection and diagnosis in the Mild Cognitive Impairment MCI stage The aim in neurophysiology research is to develop signal processing methods that improve the specificity for diagnosing dementia we wish to discover signal features that not only significantly differ in AD patients but also allow us to reliably separate AD patients and control subjects This approach is valuable for clinical purposes as diagnostic tool for dementia and it also more fundamentally contributes to a better understanding of brain dynamics of MCI patients Finally the development of neurophysiological biomarker could be useful in monitoring pharmacological treatments The main focus of

this special issue will be on the most recent developments and ideas in the field of EEG and neurophysiology which will enable us to extract features that improve the specificity for diagnosing AD and dementia **Handbook of Food and Feed**
