Grade Life Science P3

Frederic Y M Wan

Grade Life Science P3:

Stochastic Models In The Life Sciences And Their Methods Of Analysis Frederic Y M Wan, 2019-08-29 the volume is impressively accessible The result is a book that is valuable and approachable for biologists at all levels including those interested in deepening their skills in mathematical modeling and those who seek an overview to aid them in communicating with collaborators in mathematics and statistics The former group of readers may especially appreciate the first chapter an introduction to key concepts in probability and the set of ten assignments provided as an appendix CHOICE Biological processes are evolutionary in nature and often evolve in a noisy environment or in the presence of uncertainty Such evolving phenomena are necessarily modeled mathematically by stochastic differential difference equations SDE which have been recognized as essential for a true understanding of many biological phenomena Yet there is a dearth of teaching material in this area for interested students and researchers notwithstanding the addition of some recent texts on stochastic modelling in the life sciences The reason may well be the demanding mathematical pre requisites needed to solve SDE A principal goal of this volume is to provide a working knowledge of SDE based on the premise that familiarity with the basic elements of a stochastic calculus for random processes is unavoidable Through some SDE models of familiar biological phenomena we show how stochastic methods developed for other areas of science and engineering are also useful in the life sciences In the process the volume introduces to biologists a collection of analytical and computational methods for research and applications in this emerging area of life science The additions broaden the available tools for SDE models for biologists that have been limited by and large to stochastic simulations

Mathematical Modeling in the Social and Life Sciences Michael Olinick, 2014-05-05 The goal of this book is to encourage the teaching and learning of mathematical model building relatively early in the undergraduate program The text introduces the student to a number of important mathematical topics and to a variety of models in the social sciences life sciences and humanities

Artificial Intelligence in Education Alexandra I. Cristea, Erin Walker, Yu Lu, Olga C. Santos, Seiji Isotani, 2025-08-19 This six volume set LNAI 15877 15882 constitutes the refereed proceedings of the 26th International Conference on Artificial Intelligence in Education AIED 2025 held in Palermo Italy during July 22 26 2025 The 130 full papers and 129 short papers presented in this book were carefully reviewed and selected from 711 submissions The conference program comprises seven thematic tracks Track 1 AIED Architectures and Tools Track 2 Machine Learning and Generative AI Emphasising datadriven Track 3 Learning Teaching and Pedagogy Track 4 Human Centred Design and Design Based Research Track 5 Teaching AI Track 6 Ethics Equity and AIED in Society Track 7 Theoretical Aspects of AIED and AI Based Modelling for Education
