embedded in multiple contexts and each of these contexts interacts with individual characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics and bullying perpetration or victimization Recognizing that bullying behavior is a major public health problem that demands the concerted and coordinated time and attention of parents educators and school administrators health care providers policy makers families and others concerned with the care of children this report evaluates the state of the science on biological and psychosocial consequences of peer victimization and the risk and protective factors that either increase or decrease peer victimization behavior and consequences **Most Likely to Succeed** Tony Wagner,Ted Dintersmith,2015-08-18 An urgent call for the radical re imagining of American education so that we better equip students for the realities of the twenty first century
