

# How Plants Grow

Plants are like vacuums that suck nutrients, water and air from the soil as they grow. The nutrients consumed in the largest amounts are nitrogen (N), phosphorus (P) and potassium (K). Farmers work hard to grow healthy crops to feed the world. They must replace the soil nutrients each harvest to ensure the new plants have the proper food to grow healthy and strong.

- Seeds
- Petals
- Leaves
- Stem
- Roots

Phosphorus (P) helps plants catch energy from the sun.

Potassium (K) protects plants from disease and helps provide stem strength.

Potassium (K) keeps plants from wilting.

Nitrogen (N) makes plants strong.

Healthy roots need phosphorus (P).
