

Procedure Guide... Interventional Radiology

Interventional Radiology is a subspecialty of radiology in which minimally invasive procedures are performed using image guidance. Interventional radiologists use their expertise in reading x-rays, ultrasound and other medical images to guide small instruments such as catheters through blood vessels or other pathways to treat disease. These procedures are typically much less invasive and much less costly than traditional surgery. Some of these procedures are done for purely diagnostic purposes, while others are done for treatment purposes. The images are used to direct the procedure and provide the roadmap that allows the interventional radiologists to guide these instruments through the body to the area of interest.

Some Procedures Performed

- Percutaneous Inserted Central Catheters (PICC lines)
- Dialysis Catheters: Temporary and Permanent
- Angiography
- Port Check
- Nephrostomy Tubes
- Urteral Stent Placement
- Cholecystostomy Tube

Before Your Test

If your doctor's office did not schedule your appointment for you, please call (440) 234-8888 to schedule. Please listen to the instructions that are given to you. These are important to the timely completion of your procedure.

If you have questions, please call (440) 234-8438. We will be happy to answer them for you.

Some procedures require that you do not eat prior to the procedure. When you schedule your procedure, you will be given instructions regarding what you may or may not be able to eat or drink.

You will need to change into a gown for your procedure.

Please bring a list of all the medications that you take and your allergies. You will be asked a series of health history questions.

You may need blood tests before your procedure. If you are on blood thinners, i.e. aspirin, Plavix, Coumadin, you may be asked to stop taking these a few days prior to your procedure. When you call to schedule your procedure, you will be given instructions. Blood tests will need to be done to make sure that no bleeding complications will occur before your procedure.

Please arrive at least 15 minutes prior to your appointment time to register.

Please bring with you your order from the doctor.

The technologist or nurse will explain the procedure to you and answer any questions that you may have. You will then be asked to sign a consent form.

During Your Test

You may require an injection of contrast for your procedure. This highlights certain areas that otherwise would not be seen. Any questions concerning contrast will be answered by the physician, nurse or technologist prior to administration.

Each procedure varies in length, some last approximately 30 minutes, while others can take hours.

Sedation, which is a numbing medicine, is given for all procedures. It lasts and wears off a few seconds while injected. After the sedation is given, you should not feel any pain. Let the doctor know right away if you do. You do not "go to sleep" for these procedures.

You will be required to lay flat on the x-ray table for the procedure. It is very important that you remain still for your procedure. This is for your safety and will allow the procedure to progress quickly.

A Physician, Registered Nurse and Radiologic Technologist is present for each procedure.

After Your Test

A specially trained and Board Certified Physician (radiologist) will interpret your images and send a report to your doctor that ordered this procedure.

If for any reason you feel you need medical attention related to this procedure, please contact the physician who ordered your procedure or go to the nearest emergency room.

If you received contrast during your procedure, you will be encouraged to drink a lot of water over the next 24 hours to help flush the contrast out of your system.

Your doctor that ordered your procedure will receive a detailed report.

There may be certain restrictions after your procedure. The Radiologist, nurse and technologists will go over any special instructions with you prior to your discharge.
