**The Ancient Maya Marketplace**

Eleanor M. King, 2015-11-12 Trading was the favorite occupation of the Maya according to early Spanish observers such as Fray Diego de Landa 1566 Yet scholars of the Maya have long dismissed trade specifically market exchange as unimportant They argue that the Maya subsisted primarily on agriculture with long distance trade playing a minor role in a largely non commercialized economy The Ancient Maya Marketplace reviews the debate on Maya markets and offers compelling new evidence for the existence and identification of ancient marketplaces in the Maya Lowlands Its authors rethink the prevailing views about Maya economic organization and offer new perspectives They attribute the dearth of Maya market research to two factors persistent assumptions that Maya society and its rainforest environment lacked complexity and an absence of physical evidence for marketplaces a problem that plagues market research around the world Many Mayanists now agree that no site was self sufficient and that from the earliest times robust local and regional exchange existed alongside long distance trade Contributors to this volume suggest that marketplaces the physical spaces signifying the presence of a market economy did not exist for purely economic reasons but served to exchange information and create social ties as well The Ancient Maya Marketplace offers concrete links between Maya archaeology ethnohistory and contemporary cultures Its in depth review of current research will help future investigators to recognize and document marketplaces as a long standing Maya cultural practice The volume also provides detailed comparative data for premodern societies elsewhere in the world

**Information Theory And Evolution (2nd Edition)** John Scales Avery,2012-05-21 Information Theory and Evolution discusses the phenomenon of life including its origin and evolution and also human cultural evolution against the background of thermodynamics statistical mechanics and information theory Among the central themes is the seeming contradiction between the second law of thermodynamics and the high degree of order and complexity produced by living systems This paradox has its resolution in the information content of the Gibbs free energy that enters the biosphere from outside sources as the author will show The role of information in human cultural evolution is another focus of the book The first edition of

Information Theory and Evolution made a strong impact on thought in the field by bringing together results from many disciplines. The new second edition offers updated results based on reports of important new research in several areas including exciting new studies of the human mitochondrial and Y chromosomal DNA. Another extensive discussion featured in the second edition is contained in a new appendix devoted to the relationship of entropy and Gibbs free energy to economics. This appendix includes a review of the ideas of Alfred Lotka, Frederick Soddy, Nicholas Georgescu-Roegen, and Herman E. Daly and discusses the relevance of these ideas to the current economic crisis. The new edition discusses current research on the origin of life, the distinction between thermodynamic information and cybernetic information, new DNA research, and human prehistory, developments in current information technology, and the relationship between entropy and economics.
