Knowledge Abstraction to Management Aparajita Suman,2013-10-31 The increasing volume of information in the contemporary world entails demand for efficient knowledge management KM systems a logical method of information organization that will allow proper semantic querying to identify things that match meaning in natural language On this concept the role of an information manager goes beyond implementing a search and clustering system to the ability to map and logically present the subject domain and related cross domains From Knowledge Abstraction to Management answers this need by analysing ontology tools and techniques helping the reader develop a conceptual framework from the digital library perspective Beginning with the concept of knowledge abstraction before discussing the Solecistic versus the Semantic Web the book goes on to consider knowledge organisation the development of conceptual frameworks untying conceptual tangles and the concept of faceted knowledge representation Offers a semantic solution to knowledge and information managers Demonstrates the development of a system for semantic knowledge organization and retrieval Relevant to those without much coding experience Contemporary Perspectives on Architectural Organicism Gary Huafan He,Skender

Luarasi,2023-06-07 This project is born out of similar questions and discussions on the topic of organicism emergent from two critical strands regarding the discourse of organic self generation one dealing with the problem of stopping in the design processes in history and the other with the organic legacy of style in the nineteenth century as a preeminent form of aesthetic ideology The epistemologies of self generation outlined by enlightenment and critical philosophy provided the model for the discursive formations of modern urban planning and architecture The form of the organism was thought to calibrate modernism s infinite extension The architectural organicism of today does not take on the language of the biological

sciences as they did in the nineteenth and twentieth centuries but rather the image of complex systems be they computational informational geo ecological or even ontological aesthetic networks What is retained from the modernity of yesterday is the ideology of endless self generation Revisiting such a topic feels relevant now in a time when the idea of endless generation is rendered more suspect than ever amid an ever increasing speed and complexity of artificial intelligence AI networks The essays collected in this book offer a variety of critiques of the modernist idea of endless growth in the fields of architecture literature philosophy and the history of science They range in scope from theoretical and speculative to analytic and critical and from studies of the history of modernity to reflections of our contemporary world Far from advocating a return to the romantic forms of nineteenth century naturphilosophie this project focuses on probing organicism for new forms of critique and emergent subjectivities in a contemporary post pandemic constellation of neo naturalism in design climate change complex systems and information networks This book will be of interest to a broad range of researchers and professionals in architecture and art history historians of science visual artists and scholars in the humanities more generally
