World Radio TV Handbook, WRTH, 2004, 2004 Farm-Level Modelling Shailesh

Shrestha, Andrew Barnes, Bouda Vosough Ahmadi, 2016-09-28 Agriculture is the product of a complex mixture of behavioural biophysical and market drivers Understanding how these factors interact to produce crops and livestock for food has been the focus of economic investigation for many years The advent of optimisation algorithms and the exponential growth in computing technology has allowed significant growth in mathematical modelling of the dynamics of agricultural systems The complexity of approaches has grown in parallel with the availability of data at increasingly finer resolutions Farm level models have been widely used in agricultural economic studies to understand how farmers and land owners respond to market and policy levers This book provides an in depth description of different methodologies and techniques currently used

in farm level modelling While giving an overview of the theoretical grounding behind the models an applied approach is also used Case studies range from the application of modelling to policy reforms and the subsequent impacts on rural communities and food supply This book also provides descriptions of the use of farm level models in much wider fields such as aggregation and linking with sectoral models Its purpose is to show the reader the methods that have been employed to inform decision makers about how to improve the economic social and environmental goals required to achieve the aims of multidimensional policy Lloyd's Register OneOcean's Guide to Port Entry 1971-1972 Lloyd's Register

Using Rational-Emotive Therapy Effectively Michael E. Bernard,2013-11-21 The initial conceptualization of this book was much more narrow than the final product that has emerged I started out believing that it would be enlightening to have a group of acknowledged rational emotive therapy RET expert practitioners with well established literary credentials write about how they approach the problem of modifying client irrationality Many RET practitioners of all levels of experience are on the one hand enamored of the economy the precision and the accuracy of psychological insight that RET theory offers but they are on the other hand equally frustrated by their own inability to persuade or otherwise change some of the clients they work with more quickly or even at all Indeed clients themselves frequently express the view that RET is illuminating yet they find themselves at the same time puzzled and perplexed by their inability to make the substantial changes that RET invites It became dearer as I discussed the project with many of the contributors that to practice RET effectively requires more than just innovative and persistent assessment and intervention techniques For example Russell Grieger expressed the view that more prerequisite work needs to be done on the value and philosophical systems of clients including personal responsibility and the philosophy of happiness before many clients can show significant shifts in their thinking Susan Walen raised the general issues of how effective RET can be in the treatment of biologically driven affective disorders
