Community Responses to Disasters in the Pacific Rim Shu-Mei Huang, Elizabeth Maly, 2023-12-07 *Community Responses to Disasters in the Pacific Rim* presents different aspects of place making in displacement in the Pacific Rim region. It focuses on how people respond and readjust to changes and captures the long term community development outcomes and the critical moments that facilitate this development. Interdisciplinary and using diverse research approaches, the book includes contributions by authors from a variety of disciplines across disaster research, sociology, urban planning, architecture, anthropology, earth science, and education. Mixed methods are adopted to carry out the research projects that ground this volume, including qualitative research for social scientific research, ethnographic methods, and more importantly, Participatory Action Research (PAR). PAR is also included by authors who have a background in design professions and a few indigenous scholars who are themselves survivors of disasters. The chapters are structured in the following five thematic sections: Learning as place making in displacement, Gender and place making in response to displacement, Community resilience in keeping indigenous sense of place, Community Re building in displacement, Transnational Place making. Talk to the Actor. Understanding how affected communities are recovering from their own perspectives, this book will be of interest to academics in the fields of area studies, political science, disaster planning, and human geography. *NIST Special Publication*, 1995 **Civil Engineering, JSCE.**, 1997 *Japan's Beach Erosion: Reality And Future Measures (Second Edition)* Takaaki Uda, 2017-03-16 Beaches in Japan have been eroding since the 1970s because of artificial land alterations and unsustainable coastal development. Almost all causes of the beach erosion in Japan are due to anthropogenic factors as a result of human activity. This book presents the state of the beaches throughout Japan, looking at the current reality and the classification of causes of beach erosion using real life illustrated examples. It then goes on to look at practical models which can be used to predict changes to different types of beaches and concludes with investigation of beach erosion as a wider structural problem. Lessons learnt show the manner in which excessive coastal development without clearly identified measures for beach protection can have widespread global ramifications. This second edition presents new findings from field studies carried out on Japanese beaches along with the development and improvement of the numerical model presented previously. In addition to the first edition, six new examples of the beach erosion in Japan are included, as is a new analysis of the BG model, a model for predicting based on Bagnold's concept which can be applicable to various field problems. Originally published in Japanese, 2004, this updated version gives clear practical guidance to coastal engineers working to prevent irreversible beach erosion and sustainable coastal development policy. **Coasts, Marine Structures and Breakwaters** 2023 Kevin Burgess, 2024-03-19 The ICE Coasts Maritime Structures and Breakwaters conference series is the leading international forum for the presentation of the latest developments in coastal and maritime engineering. This book is provided as 2 individual volumes. **Corrosion Engineering**, 1995 *Japan's Beach Erosion: Reality And Future Measures* Takaaki

Uda,2010-06-23 Beaches in Japan have been eroding since the 1970s as a result of the artificial land alterations Approximately 3000 fishing ports and 1000 commercial ports have been built nationwide as well as 2532 large dams being constructed in the upstream basins of large rivers Due to the port and dam developments fluvial sand supply has significantly reduced resulting in shoreline recession around the river mouths Continuous sand supply along the coastline has also been obstructed by the port breakwaters The formation of wave shelter zone by the port breakwaters induce longshore sand transport thereby leading to an accretion of large amount of sand in the wave shelter zone and erosion in the surrounding area Thus almost all causes of the beach erosion in Japan are due to anthropogenic factors The exact situation of the beach erosion has never been clear in literatures that are written in Japanese or in English Coastal engineers can and should learn from these results otherwise the same situation and problems which were induced by excessive coastal development without protection measures and due attention given to nearby coasts will recur throughout the world Textbooks on coastal engineering that were already published describe only the theoretical fundamentals of the subject but lack the practical perspectives and field studies The book examines many coastal areas as examples highlighting the various erosion factors which should be avoided elsewhere globally This book was first published in Japanese in 2004 and was translated into English by the present author **Concrete Library International** ,2001 *History* Colin van Rensburg,2011

Coral Reef Studies of Japan Akira Iguchi, Chuki Hongo, 2018-02-15 This book comprehensively introduces recent important studies on coral reefs from various research fields including biology ecology chemistry the earth sciences and conservation studies Coral reef is one of the important

ecosystems characterized by high biodiversity and the beauty Coral reefs around Japan are located at the northern limit composed by mainly fringing reefs along archipelago and easily impacted by human activities Thus coral reef studies around Japan have provided important knowledge on basic sciences and conservation studies regarding coral reef ecosystem This book would contribute to systematic understanding of vulnerable coral reef ecosystems due to human activities in the Indo Pacific and Caribbean regions The conservation efforts provide good reference to graduate and undergraduate students and researchers in marine sciences as well as those who are involved in coral reef studies Geotechnical Earthquake Engineering Ikuo Towhata, 2008-12-19 This book is a product of my long term activities in both education and research Its publication was made possible by a financial support supplied by the Ministry of Education Culture Sports Science and Technology As for education I was told for the first time in 1985 to teach soil dynamics in Asian Institute of Technology in Bangkok Thailand I collected experimental and field findings from many publications and made a small series of handouts Since computer technologies were not well advanced in mid 80s the handouts were products of cut and paste in the physical sense Many pages were even handwritten Afterwards I started to teach the same subject in 1995 at University of Tokyo Since then I have added more information from field investigation and laboratory tests as well as analyses It has become possible to put all in an electronic media that makes teaching easier Readers can find that this book includes Japanese writing among English text This is because I use this text for teaching in Tokyo The main aim of this book is a collection of data which is useful in understanding the state of art technology and its application to new topics Understanding the fundamental issues is important because practice makes use of many assumptions hypotheses and way of thinking It has been my policy to show reasons why practice employs those ideas by showing experimental and field backgrounds This idea does not change even today
