Bishop, Hazel Tan, Tasos N Barkatsas, 2014-09-20 This book presents a research focus on diversity and inclusivity in mathematics education. The challenge of diversity largely in terms of student profiles or contextual features is endemic in mathematics education and is often argued to require differentiation as a response. Typically different curricula, text materials, task structures or pedagogies are favoured responses but huge differences in achievement still result. If we in mathematics education seek to challenge that status quo more research must be focussed not just on diversity but also on the inclusivity of practices in mathematics education. The book is written by a group of experienced collaborating researchers who share this focus. It is written for researchers, research students, teachers and in-service professionals who recognise both the challenges but also the opportunities of creating and evaluating new inclusive approaches to curriculum and pedagogy ones that take for granted the positive values of diversity. Several chapters report new research in this direction. The authors are part of or have visited with the mathematics education staff of the Faculty of Education at Monash University in Melbourne, Australia. The chapters all focus on the ideas of development in both research and practice, recognising that the current need is for new inclusive approaches. The studies presented are set in different contexts including Australia, China, the United States and Singapore.

**Teaching STEM in the Secondary School** Frank Banks, David Barlex, 2014-07-17 The skills, knowledge and understanding of the subjects involved in STEM (Science, Technology, Engineering and Mathematics) are vital for all young people in an increasingly science and technology driven society. This book looks at the purpose and pedagogy of STEM teaching and explores the ways in which STEM subjects can interact in the curriculum to enhance student understanding, achievement and motivation. By reaching outside their own classroom, teachers can collaborate across subjects to enrich learning and help students relate school science, technology and maths to the wider world. Packed with ideas and practical details for teachers of STEM subjects, this book considers what the STEM subjects contribute separately to the curriculum and how they relate to each other in the wider education of secondary school students. It describes and evaluates different curriculum models for STEM, suggests ways in which a critical approach to the pedagogy of the classroom, laboratory and workshop can support STEM for all students, addresses the practicalities of introducing, organising and sustaining STEM related activities in the secondary school, looks at ways schools can manage and sustain STEM approaches in the long term. This timely new text is essential reading for trainee and practising teachers who wish to make the learning of Science, Technology, Engineering and
