Transitions to Alternative Transportation Technologies National Research Council,Division on Engineering and Physical Sciences,Board on Energy and Environmental Systems,Committee on Assessment of Resource Needs for Fuel Cell and Hydrogen Technologies,2008-11-17 Hydrogen fuel cell vehicles HFCVs could alleviate the nation s dependence on oil and reduce U S emissions of carbon dioxide the major greenhouse gas Industry and government sponsored research programs have made very impressive technical progress over the past several years and several companies are currently introducing pre commercial vehicles and hydrogen fueling stations in limited markets However to achieve wide hydrogen vehicle penetration further technological advances are required for commercial viability and vehicle manufacturer and hydrogen supplier activities must be coordinated In particular costs must be reduced new automotive manufacturing technologies commercialized and adequate supplies of hydrogen produced and made available to motorists These efforts will require considerable resources especially federal and private sector funding This book estimates the resources that will be needed to bring HFCVs to the point of competitive self sustainability in the marketplace It also estimates the impact on oil consumption and carbon dioxide emissions as HFCVs become a large fraction of the light duty vehicle fleet

Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles National Research Council,Transportation Research Board,Division on Engineering and Physical Sciences,Board on Energy and Environmental Systems,Committee to Assess Fuel Economy Technologies for Medium- and Heavy-Duty Vehicles,2010-08-30 Technologies and Approaches to Reducing the Fuel Consumption of Medium and Heavy Duty Vehicles evaluates various technologies and methods that could improve the fuel economy of medium and heavy duty vehicles such as tractor trailers transit buses and work trucks The book also recommends approaches that federal agencies could use to regulate these vehicles fuel consumption Currently there are no fuel consumption standards for such vehicles which account for about 26 percent of the transportation fuel used in the U S The miles per gallon measure used to regulate the fuel economy of passenger cars is not appropriate for medium and heavy duty vehicles which are designed above all to carry loads efficiently Instead any regulation of medium and heavy duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers such as gallons per ton mile a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile This is called load specific fuel consumption LSFC The book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types For example using advanced diesel engines in tractor trailers could lower their fuel consumption by up to 20 percent by 2020 and improved aerodynamics could yield an 11 percent reduction Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently such as garbage trucks and transit buses by as much 35 percent in the same time frame

Agricultural Reform in Rwanda Chris Huggins, 2017-10-15 International observers have lauded Rwanda as an example of an African country taking control of its own development trajectory and as a market friendly destination for investment A

key component of this narrative has been an ambitious programme of agricultural reform involving private firms NGOs and international charities The Rwandan government claims these reforms have been a resounding success tripling crop yields and helping to combat hunger Chris Huggins argues however that Rwanda s liberal modernising image sits poorly with the regime s continuing authoritarian tendencies Featuring in depth case studies of the effects of agricultural reform in three different regions and drawing on hundreds of interviews Huggins shows that the much vaunted liberalization of agriculture has in fact depended on the coercion of Rwandan farmers and in many cases has had a detrimental impact on their livelihoods With the Kagame regime now coming under increasing international scrutiny this work provides a timely look at the impact of market friendly authoritarianism in contemporary Africa making essential reading for students and scholars of development in the fields of sociology anthropology political science and economics

Brick Architecture Craft in Nineteenth-Century South India Priya Joseph, 2025-03-18. This book explores brick architecture of the nineteenth century in South India through the lens of tectonics and materiality. The book is a diachronically elaborated history of brick architecture, especially analysing the hybridity due to the indigenous and colonial intersections of nineteenth century India. It offers a decolonial reading of architecture through meticulous measured drawings as a tool and presents an argument for reading buildings as archives. South India has thousands of dilapidated buildings which may be erased due to neglect, lax laws and ignorance. The book exposes the tectonics, fixing material choices, socio-political circumstances of this architecture in brick. This method of analysing the dilapidated buildings as an archive of construction forefronts the makers and the agency of the local craftspeople rather than an Anglo-centric gaze. Brick buildings such as the extravagantly ornamental and structurally rich Chatrams of Thanjavur, Rosary Church, Hassan and Fort School, Bengaluru are some of the many cases elaborated in the book. The book connects the history of brick to its many contemporary challenges and manifestations. The book is intended for students and scholars of architecture history, material culture, colonial studies and the Global South as well as anyone interested in brick as material for architecture.

South Africa's Energy Transition Tobias Bischof-Niemz, Terence Creamer, 2018-07-11. South Africa's energy transition has become a highly topical, emotive and politically contentious topic. Taking a systems perspective, this book offers an evidence-based roadmap for such a transition and debunks many of the myths raised about the risks of a renewable energy-led electricity mix. Owing to its formidable solar and wind resources, South Africa has an almost unparalleled opportunity to turn solar photovoltaic and onshore wind generators into the country's power generation workhorses, a role hitherto played by coal. This book shows that a renewables-led mix will not only provide the lowest cost but will also create more jobs than any of the alternatives currently under consideration. In addition, it offers a

glimpse of how South Africa's low cost and decarbonised electricity system can power a competitive industrial economy an electric mobility revolution and in the long run create new export opportunities This book will be of great interest to energy industry practitioners as well as students and scholars of energy policy and politics environmental economics and sustainable development
