Hibbeler,1994-10-01 **Materials Interaction with Femtosecond Lasers** Bernd Bauerhenne,2021-10-25 This book presents a unified view of the response of materials as a result of femtosecond laser excitation introducing a general theory that captures both ultrashort time non thermal and long time thermal phenomena It includes a novel method for performing ultra large scale molecular dynamics simulations extending into experimental and

technological spatial dimensions with ab initio precision For this it introduces a new class of interatomic potentials constructed from ab initio data with the help of a self learning algorithm and verified by direct comparison with experiments in two different materials the semiconductor silicon and the semimetal antimony In addition to a detailed description of the new concepts introduced as well as giving a timely review of ultrafast phenomena the book provides a rigorous introduction to the field of laser matter interaction and ab initio description of solids delivering a complete and self contained examination of the topic from the very first principles It explains step by step from the basic physical principles the underlying concepts in quantum mechanics solid state physics thermodynamics statistical mechanics and electrodynamics introducing all necessary mathematical theorems as well as their proofs A collection of appendices provide the reader with an appropriate review of many fundamental mathematical concepts as well as important analytical and numerical parameters used in the simulations
