Transitions to Alternative Vehicles and Fuels National Research Council,Division on Engineering and Physical Sciences,Board on Energy and Environmental Systems,Committee on Transitions to Alternative Vehicles and Fuels,2013-04-14 For a century almost all light duty vehicles LDVs have been powered by internal combustion engines operating on petroleum fuels Energy security concerns about petroleum imports and the effect of greenhouse gas GHG emissions on global climate are driving interest in alternatives Transitions to Alternative Vehicles and Fuels assesses the potential for reducing petroleum consumption and GHG emissions by 80 percent across the U S LDV fleet by 2050 relative to 2005 This report examines the current capability and estimated future performance and costs for each vehicle type and non petroleum based fuel technology as options that could significantly contribute to these goals By analyzing scenarios that combine various fuel and vehicle pathways the report also identifies barriers to implementation of these technologies and suggests policies to achieve the desired reductions Several scenarios are promising but strong and effective policies such as research and development subsidies energy taxes or regulations will be necessary to overcome barriers such as cost and consumer choice Journal of Sustainable Mobility Vol. 2 Issue 1 Michael Zhang,Fuquan Zhao,Han Hao,2024-11-01 After three decades of rapid economic growth China became the world s second largest economy in 2010 after the United States of America Along with the prospect of lifting millions out of poverty and improving living standards China is facing yet new challenges of rapid urbanization Recent research findings show that in 2012 urbanization rate was 52.6% in China Lacy et al 2013 It is predicted that by 2020 the number of megacities in China with an urban population of more than 10 million will increase to thirteen Along with the increase in urban population and living standards there has been rapid increase of car ownership in China It is estimated that there are more than five million vehicles in Beijing Cheng 2013 Economist 2013 Large cities and prefecture level cities already contributed 89.6% of China s total industrial CO₂ emissions One day in January 2013 air in Beijing was heavily polluted to a level of toxicity smog forty times the standard safe level set by the World Health Organization Economist 2013 At the international level transport contributed 61.5% to world petroleum consumption and 22.3% to global CO₂ emissions in 2010 IEA 2012 While the overall level of CO₂ emissions in developed economies is stabilizing and in some cases declining the levels in the developing and emerging economies are increasing Large emerging economies with megacities will imminently become the major concerns of transport related CO₂ emissions Without strategic innovations in the automotive industry and transport management system the current state of China s transport sector is not sustainable The long term sustainable solutions are likely to emerge from the interplay of economic environmental social and technological factors The Special Issue partnered with the Second International Symposium on Sustainable Mobility focuses

on the issues of developing policies and corporate strategies to help the automotive industry transport management systems and urban planning to embark on a sustainable path to future growth and development WBCSD 2007 World Bank 2008 The critical debate and research findings of this issue shed light on future research and practice on sustainable mobility in emerging economies Modern Electric, Hybrid Electric, and Fuel Cell Vehicles Mehrdad Ehsani, Yimin Gao, Stefano Longo, Kambiz Ebrahimi, 2018-02-02 This book is an introduction to automotive technology with specific reference to battery electric hybrid electric and fuel cell electric vehicles It could serve electrical engineers who need to know more about automobiles or automotive engineers who need to know about electrical propulsion systems For example this reviewer who is a specialist in electric machinery could use this book to better understand the automobiles for which the reviewer is designing electric drive motors An automotive engineer on the other hand might use it to better understand the nature of motors and electric storage systems for application in automobiles trucks or motorcycles The early chapters of the book are accessible to technically literate people who need to know something about cars While the first chapter is historical in nature the second chapter is a good introduction to automobiles including dynamics of propulsion and braking The third chapter discusses in some detail spark ignition and compression ignition Diesel engines The fourth chapter discusses the nature of transmission systems James Kirtley Massachusetts Institute of Technology USA The third edition covers extensive topics in modern electric hybrid electric and fuel cell vehicles in which the profound knowledge mathematical modeling simulations and control are clearly presented Featured with design of various vehicle drivetrains as well as a multi objective optimization software it is an estimable work to meet the needs of automotive industry Haiyan Henry Zhang Purdue University USA The extensive combined experience of the authors have produced an extensive volume covering a broad range but detailed topics on the principles design and architectures of Modern Electric Hybrid Electric and Fuel Cell Vehicles in a well structured clear and concise manner The volume offers a complete overview of technologies their selection integration control as well as an interesting Technical Overview of the Toyota Prius The technical chapters are complemented with example problems and user guides to assist the reader in practical calculations through the use of common scientific computing packages It will be of interest mainly to research postgraduates working in this field as well as established academic researchers industrial R D engineers and allied professionals Christopher Donaghy Sparg Durham University United Kingdom The book deals with the fundamentals theoretical bases and design methodologies of conventional internal combustion engine ICE vehicles electric vehicles EVs hybrid electric vehicles HEVs and fuel cell vehicles FCVs The design methodology is described in mathematical terms step by step and the topics are approached from the overall drive train system not just individual components Furthermore in explaining the design methodology of each drive train design examples are presented with simulation results All the chapters have been updated and two new chapters on Mild Hybrids and Optimal Sizing and Dimensioning and Control are also included Chapters updated throughout the text New homework problems solutions and examples Includes two new
