Einstein, Tagore and the Nature of Reality Partha Ghose, 2016-06-23 The nature of reality has been a long debated issue among scientists and philosophers In 1930 Rabindranath Tagore and Albert Einstein had a long conversation on the nature of reality This conversation has been widely quoted and discussed by scientists philosophers and scholars from the literary world The important question that Tagore and Einstein discussed was whether the world is a unity dependent on humanity or the world is a reality independent on the human factor Einstein took the stand adopted by Western philosophers and mathematicians namely that reality is something independent of the mind and the human factor Tagore on the other hand adopted the opposite view Nevertheless both Einstein and Tagore claimed to be realists despite the fundamental differences between their conceptions of reality Where

does the difference lie Can it be harmonized at some deeper level Can Wittgenstein for example be a bridge between the two views This collection of essays explores these two fundamentally different conceptions of the nature of reality from the perspectives of theories of space time quantum theory general philosophy of science cognitive science and mathematics

The Nature of Language Dieter Hillert, 2014-04-30 The Nature of Language addresses one of the most fundamental questions of mankind how did language evolve and what are the neurobiological and cognitive foundations of language processing These questions are explored from different perspectives to discuss the building blocks of language evolution and how they developed in the way they can be found in modern humans Primarily neural mapping methods of cognition presented in this research provide extremely valuable data about the neural circuitries that are involved in language processing Thus the book explores and illustrates cortical mapping in typical language patterns but also cortical mapping in atypical populations that fail to process particular language aspects A neurobiological stance is used to inquire about how language abilities of our species evolved to communicate for the purposes of conveying information such as ideas emotions goals and humor The evolutionary language model presented builds on the cognitive abilities of our ancestors and it allows readers to draw a variety of expansive conclusions from that including the idea that human language as an interface system provides the basis for consciousness
