**Beyond PD-1: novel checkpoint receptors and ligands as targets for immunotherapy** Jesse Haramati,Dallas Flies,Fabiola Solorzano Ibarra,2025-02-24 The incredible power of the immune system to control or eliminate neoplasias has been made evident by the success of immune checkpoint inhibitors ICI While inhibitory checkpoint receptors are critical for the maintenance of hemostasis under physiological conditions dysregulation in the tumor microenvironment perturbs the role of these molecules with the promotion of exhausted cytotoxic cells that is cytotoxic cells that no longer are able to control tumors ICI leverages these targets to redirect cytotoxic responses and neutralize the suppressive tumor microenvironment However not all tumor types or patients respond to these therapies Great interest continues to be focussed on first generation ICI therapy PD 1 PD L1 and CTLA 4 but the potential for other targets and ligands remains vast [Immune Checkpoint Inhibitors in Cancer](#) Fumito Ito,Marc Ernstoff,2018-09-03 Get a quick expert overview of the latest clinical information and guidelines for cancer checkpoint inhibitors and their implications for specific types of cancers This practical title by Drs Fumito Ito and Marc Ernstoff synthesizes the most up to date research and clinical guidance available on immune checkpoint inhibitors and presents this information in a compact easy to digest resource It s an ideal concise reference for trainee and practicing medical oncologists as well as those in research Discusses the current understanding of how to best harness the immune system against different types of cancer at various stages Helps you translate current research and literature into practical information for daily practice Presents information logically organized by disease site Covers tumor immunology and biology toxicities associated with immune checkpoint inhibitors and future outlooks Consolidates today s available information on this timely topic into one convenient resource

**Monoclonal Antibodies and Immune Checkpoint Inhibitors in the treatment of Cancer** Prakash Radhakrishnan,Cory L. Brooks,Murali M. Yallapu,2025-01-13 Cancer is a complex disease that can evade the immune system s natural defenses However recent advancements in immunotherapy have revolutionized cancer treatment by using the body s own immune system to fight cancer Monoclonal antibodies mAbs and immune checkpoint inhibitors are two types of immunotherapy that have shown promise in treating various types of cancer

Monoclonal antibodies are laboratory produced antibodies that are designed to recognize and target specific proteins on the surface of cancer cells. These antibodies can be used alone or in combination with other therapies such as chemotherapy or radiation. Monoclonal antibodies work by binding to cancer cells and blocking their ability to grow and divide or by marking them for destruction by the immune system. For example, trastuzumab (Herceptin) is a monoclonal antibody that targets HER2 positive breast cancer cells and can be used in combination with chemotherapy to improve survival rates.

Regulation of Cancer Immune Checkpoints Jie Xu, 2020-03-17 This book systematically reviews the most important findings on cancer immune checkpoints, sharing essential insights into this rapidly evolving yet largely unexplored research topic. The past decade has seen major advances in cancer immune checkpoint therapy, which has demonstrated impressive clinical benefits. The family of checkpoints for mediating cancer immune evasion now includes CTLA-4, PD-1, PD-L1, CD27, CD70, FGL-1, LAG-3, Siglec-15, VISTA, PD-1L, VSIG3, CD47, SIRPA, APOE, LILRB4, TIGIT, and many others. Despite these strides, most patients do not show lasting remission, and some cancers have been completely resistant to the therapy. The potentially lethal adverse effects of checkpoint blockade represent another major challenge, the mechanisms of which remain poorly understood. Compared to the cancer signaling pathways such as p53 and Ras, mechanistic studies on immune checkpoint pathways are still in their infancy. To improve the responses to checkpoint blockade therapy and limit the adverse effects, it is essential to understand the molecular regulation of checkpoint molecules in both malignant and healthy cells/tissues. This book begins with an introduction to immune checkpoint therapy and its challenges and subsequently describes the regulation of checkpoints at different levels. In closing, it discusses recent therapeutic developments based on mechanistic findings and outlines goals for future translational studies. The book offers a valuable resource for researchers in the cancer immunotherapy field, helping to form a roadmap for checkpoint regulation and develop safer and more effective immunotherapies.
