Psychology** Julie Christian,Mortimer Adler,2018-04-17 Psychology is a field of many paradoxes Since its earliest beginnings
as a natural science psychologists have been in search of their proper subject matter Today they are in less agreement than
ever In this classic text originally published as *What Man Has Made of Man* Mortimer J Adler goes to the root of the problem
He shows that psychology is simultaneously a particular social science and a branch of philosophical knowledge These two
parts must be distinguished from yet related to each other if sound philosophical analysis is to replace bad philosophizing
which scientific psychologists too often use to describe their research findings Adler also examines the scientific contribution
of psychoanalysis by distinguishing it from Freud s meta psychology which he shows to be an inadequate statement of the
traditional or classical philosophical positions Adler believes that psychology is crucially important in modern culture It is
theoretically important because it is central to the errors of modern philosophy It has practical significance because
economic moral and political doctrines are determined by the view that man reviews his own nature To understand the
history of modern times and to correct its normative deviations we must according to Adler consider what man has made of
man This engaging analytical study will be a valuable tool for psychologists psychoanalysts philosophers and sociologists
