Tiger Check Steven A. Fino,2017-11-01 How did American fighter pilots respond to the challenges posed by increasing automation Spurred by their commanders during the Korean War to be tigers aggressive and tenacious American fighter pilots charged headlong into packs of fireball spewing enemy MiGs relying on their keen eyesight piloting finesse and steady trigger fingers to achieve victory But by the 1980s American fighter pilots vanquished their foes by focusing on a four inch square cockpit display manipulating electromagnetic waves and launching rocket propelled guided missiles from miles away In this new era of automated long range air combat can fighter pilots still be considered tigers Aimed at scholars of technology and airpower aficionados alike Steven A Fino s *Tiger Check* offers a detailed study of air to air combat focusing on three of the US Air Force s most famed aircraft the F 86E Sabre the F 4C Phantom II and the F 15A Eagle Fino argues that increasing fire control automation altered what fighter pilots actually did during air to air combat Drawing on an array of sources as well as his own decade of experience as an F 15C fighter pilot Fino unpacks not just the technological black box of fighter fire control equipment but also fighter pilots attitudes toward their profession and their evolving aircraft He describes how pilots grappled with the new technologies acutely aware that the very systems that promised to simplify their jobs while increasing their lethality in the air also threatened to rob them of the quintessential albeit mythic fighter pilot experience Finally Fino explains that these new systems often required new unique skills that took time for the pilots to identify and then develop Eschewing the typical great machine or great pilot perspectives that dominate aviation historiography *Tiger Check* provides a richer perspective on humans and machines working and evolving together in the air The book illuminates the complex interactions between human and machine that accompany advancing automation in the

partners are consistency in advisor pairing and maintaining a partner force to advisor ratio of twelve special forces soldiers advising a company sized force or smaller Intriguingly and counter to conventional wisdom at first glance language training and cultural awareness do not seem to be critical factors as most of the Green Berets that trained units in Iraq and Afghanistan lacked both capabilities Despite an orthodoxy that argues the opposite there is little evidence that combat advising is decisive in producing effective partners and there is conflicting evidence that language training and cultural awareness are important Many of these findings while focused on Special Forces operations and doctrine could be used to improve the odds of success for larger security force assistance missions as well
