3. Use the table in Figure 2, to write down your wire colors and the letter designations on the old thermostat. This will allow you to keep a record of your old thermostat's wiring configuration. If you are not sure of the color of a wire, or if you need help, our Technical Support Department determines your system type and proper wiring; should you need to contact them. Wire color does not indicate the function of the wire; this is being used only to help determine which wire has what letter designation.

2. Pull the wires through the back of the mounting plate, ensuring none of the wire labels are removed. Figure 2.

3. Using a Phillips Screwdriver, Partially install 1 screw into the top hole of the thermostat. Ensure the thermostat is level using the bubble level on the wall plate, Figure 7, then install the other screw. Tighten both screws until secure, Figure 8.

- If you need further assistance with wiring, or determining your system type, you can contact our Technical Support Department. See the "Technical Support" section for more information.

- Note:** Conventional systems use the compressor for air conditioning and a separate furnace for heat. Heat pump systems use the compressor for both heating and cooling.

10. Lay the ribbon across the battery compartment and install 2 (AA) Batteries into the back of the thermostat over it, Figure 10., and snap the thermostat on to the mounting plate. Refer to "Setup" on page 10 of your owner's manual to continue setup instructions, and dial-in use.
