

LUBRICATION

The life of any tractor depends upon the care it is given. Proper lubrication is a very important part of that care.

Tractors shipped to destination in United States of America, Canada, and Mexico, have the engine crankcase filled with oil. Refer to "Engine Oil", the "Lubrication Guide", and the "Lubrication Table" for proper oil and service information.

Gasoline and LP Gas engines have the crankcase filled with shipaway oil. This oil may be used for the first 100 hours of engine operation at prevailing ambient temperatures from ten degrees below zero to ninety degrees above zero Fahrenheit. **Note:** This oil is not to be diluted with kerosene for cold weather operation.

The diesel engine crankcase is filled with approved oil. This oil is satisfactory for use in the engine until the time of the first oil change period. At this time, the engine should be serviced with the recommended Series 3 oil of a viscosity grade suitable for local climatic conditions. Refer to "Engine Oil", the "Lubrication Table" and the "Lubrication Guide".

The engine has a pressure-feed lubrication system. A gear-type oil pump circulates the lubricating oil under pressure to the crankshaft bearings, connecting rod bearings, camshaft bearings, valve mechanism, and timing gears, thereby assuring positive lubrication of all parts.

The engine oil pressure Tellite indicates whether lubricating oil is circulating through the engine. Refer to page 67 for further information.

The gasoline and LP Gas engines are equipped with an oil filter which continually cleans the oil while the engine is running. The diesel engine is equipped with two oil filters. To obtain the full benefit from the filter, replace the used element with a new one every second time the oil in the crankcase is changed. (After every 200 hours of operation). Cleaning the old element is not satisfactory.

(gasoline and LP Gas engines).

To check the oil level, remove the cap with the level gauge from the oil filler tube by turning the crosspiece counterclockwise to loosen it and then pulling out the gauge. The oil level should never be above the "FULL" mark nor below the "ADD" mark on the gauge.

When checking the oil level, the gauge must be withdrawn and wiped clean, then inserted all the way and withdrawn for a true reading.

Note: Stop the engine before removing the cap. Never check the oil level while the engine is running.
