**Micro-Econometrics for Policy, Program and Treatment Effects** Myoung-jae Lee, 2005-04-07 In many disciplines of science it is vital to know the effect of a treatment on a response variable of interest the effect being known as the treatment effect Here the treatment can be a drug an education program or an economic policy and the response variable can be an illness academic achievement or GDP Once the effect is found it is possible to intervene to adjust the treatment and attain a desired level of the response variable A basic way to measure the treatment effect is to compare two groups one of which received the treatment and the other did not If the two groups are homogenous in all aspects other than their treatment status then the difference between their response outcomes is the desired treatment effect But if they differ in some aspects in addition to the treatment status the difference in the response outcomes may be due to the combined influence of more than one factor In non experimental data where the treatment is not randomly assigned but self selected the subjects tend to differ in observed or unobserved characteristics It is therefore imperative that the comparison be carried out with subjects similar in their characteristics This book explains how this problem can be overcome so the attributable effect of the treatment can be found This book brings to the fore recent advances in econometrics for treatment effects The purpose of this book is to put together various economic treatments effect models in a coherent fashion make it clear which can be parameters of interest and show how they can be identified and estimated under weak assumptions The emphasis throughout the book is on semi and non parametric estimation methods but traditional parametric approaches are also discussed This book is ideally suited to researchers and graduate students with a basic knowledge of econometrics

Federal Energy Administration,1974     **Project Independence Blueprint** United States. Federal Energy Administration,1974     Continuous-Time Econometrics G. Gandolfo,2012-12-06 Continuous time econometrics is no longer an esoteric subject although most still regard it as such so much so that it is hardly mentioned in standard textbooks on econometrics Thanks to the work done in the last 20 years both the theoretical and the applied side are by now well developed Methods of estimation have been theoretically elaborated and practically implemented through computer programs Continuous time macroeconomic models for different countries have been constructed estimated and used Being myself involved in these developments it was with great pleasure that I accepted the invitation to organize a session on continuous time econometrics in the context of the International Symposium on Economic Modelling jointly organized by the University of Urbino and the book series International Studies in Economic Modelling and co sponsored by the Consiglio Nazionale delle Ricerche The reaction of continuists from all over the world was so enthusiastic that I was able to arrange two sessions one on the theory and the other on the applications The symposium was held in Urbino on 23 25 July 1990 The papers presented in Urbino have been revised in the light of the discussion at the symposium and the referees comments Hence what is published here should become another standard reference in the field of continuous time econometrics
