

The Analytical Essay Introduction

The purpose of your essay's introduction is to give a brief explanation of your topic and to give your paper direction that will be developed in the body.

You should:

Include key information about the work (name, author, publication and so on) in the first sentences.

Lead logically into your reaction to the work ending in a claim or assertion which is **your thesis statement**. Your thesis statement should contain a specific and well articulated point of view that will be defended in the paper.

Include **direction sentences** which will explain to the reader how you will defend and support your point of view by explaining the parts of the work and their relationship to the whole work.

The thesis should be long enough to give the reader confidence that he/she knows where your argument is going. This may be eight to ten sentences.

The Body of the Analytical Essay

The claims that you have presented in your thesis will be argued in the body of the paper. Make an outline using your direction sentences to be sure the body develops all the points mentioned in the introduction.

Take each point mentioned in your directional sentences and develop it into a topic sentence. This topic sentence will be the main idea around which you will build your body paragraph.

Use supporting points, at least four or five, to underscore your main idea in this paragraph. Use quotes and brief paraphrasing from the work or facts from outside sources to further support your point of view. Use proper MLA or APA documentation.

Conclude with a sentence that wraps up the discussion of this point and do not return to discuss it again until your conclusion.

The Conclusion of the Analytical Essay

You've made your arguments and now you want to tie them to your thesis. The purpose of a conclusion is to stress the correctness of the positions you have taken and to summarize your arguments as you affirm the conclusions you have drawn from your analysis.

Always express your points in different words than you have used earlier.

Be sure your conclusion gives the reader a sense of finality and completeness.

Leave the reader with a clear picture in his/her mind

Writing the analytical essay is challenging, but it can be one of the most rewarding forms of writing to master. It demands that the writer look deeply into the relationships between the parts of a work and decide how those relationships bring meaning to the entire piece.

NTA UGC NET Paper 1 Topic-wise 52 Solved Papers (2020 to 2004) 2nd Edition Disha Experts,2021-02-04 STEM Student Research Handbook Darci J. Harland,2011 A comprehensive resource for high school teachers and students STEM Student Research Handbook outlines the various stages of large scale research projects enabling teachers to coach their students through the research process NTA UGC NET Paper 1 Topic-wise 50 Solved Papers (2019 to 2004) Disha Experts,2020-07-04 **From Research to Manuscript** Michael Jay Katz,2009-01-21 Observations Plus Recipes It has been said that science is the orderly collection of facts about the natural world Scientists however are wary of using the word fact Fact has the feeling of absoluteness and universality whereas scientific observations are neither absolute nor universal For example children have 20 deciduous baby teeth is an observation about the real world but scientists would not call it a fact Some children have fewer deciduous teeth and some have more Even those children who have exactly 20 deciduous teeth use the full set during only a part of their childhood When they are babies and toddlers children have less than 20 visible teeth and as they grow older children begin to lose their deciduous teeth which are then replaced by permanent teeth Children have 20 deciduous baby teeth is not even a complete scientific statement For one thing the statement children have 20 deciduous teeth does not tell us what we mean by teeth When we say teeth do we mean only those that can be seen with the unaided eye or do we also include the hidden unerupted teeth An observation such as children have 20 deciduous teeth is not a fact and by itself it is not acceptable as a scientific statement until its terms are explained scientifically children have 20 deciduous teeth must be accompanied by definitions and qualifiers Words that Count: A Guide to Writing Analytical Essays about Fiction Kate Sheckler,2019-01-01 Language is complex Written or spoken the complexity of language makes the medium the versatile tool we need but also creates the potential for a wide variety of misunderstandings and mistakes Whether we are attempting to understand a piece of fiction or writing a text to make our thoughts comprehensible to others the complexity of language is both necessary and fraught That said the inevitable pitfalls don't mean we need to sacrifice precision or accuracy This guide is a step by step process that offers hands on methods for accurate analysis and precise essay construction Chapter one deals with a variety of methods by which to approach stories and novels such that your analysis is structured on carefully constructed logical progression founded on the primary text rather than on hunches and guesswork and chapter two offers infrastructures and scaffolding on which any essay can be structured The structures included in chapter two are not a template and thus do not limit style or content rather they are based on a series of tasks that must be completed for an argument to be convincing As such the tasks offer a kind of map through the process of essay writing that always indicates your next step Contrary to accepted mythologies about analyzing fiction and writing essays

neither is a guessing game and this text can help you remove the guesswork from your own process **Writing Scientific Research Articles** Margaret Cargill, Patrick O'Connor, 2013-06-04 This book shows scientists how to apply their analysis and synthesis skills to overcoming the challenge of how to write as well as what to write to maximise their chances of publishing in international scientific journals The book uses analysis of the scientific article genre to provide clear processes for writing each section of a manuscript starting with clear story construction and packaging of results Each learning step uses practical exercises to develop writing and data presentation skills based on reader analysis of well written example papers Strategies are presented for responding to referee comments and for developing discipline specific English language skills for manuscript writing and polishing The book is designed for scientists who use English as a first or an additional language and for individual scientists or mentors or a class setting In response to reader requests the new edition includes review articles and the full range of research article formats as well as applying the book s principles to writing funding applications Web support for this book is available at www.writersresearch.com.au
