

Animal Cells

Move the magnifying glass over the boxes to see the different parts of an animal cell.

cell membrane - The outside layer of the cell. It controls what goes into and out of the cell and gives it its form.

cytoplasm - The constantly moving gel-like substance that supports a cell's organelles.

nucleus - The porous sphere in the center of a cell. It allows for certain materials in and out. It controls all cell activity.

mitochondria - Oval sacs within a cell which include a folded membrane (to increase surface area and do more work). They break down food and turn it into energy.

vacuole - Store water, food, and waste. Some animal cells have several smaller vacuoles while some have none whatsoever.
