Pathways to Prosperity in Rural Malawi Andrew Dabalen, Alejandro de la Fuente, Aparajita Goyal, Wendy Karamba, Tomomi Tanaka, 2017-07-06 By most accounts rural Malawi has lacked dynamism in the past decade Growth has been mostly volatile in large part due to unstable macroeconomic fundamentals evidenced by high inflation fiscal deficits and interest rates When rapid economic growth has materialized the gains have not always reached the poorest Poverty remains high and the rural poor face significant challenges in consistently securing enough food Several factors contribute to stubbornly high rural poverty They include a low productivity and non diversified agriculture macroeconomic and recurrent climatic shocks limited non farm opportunities and low returns to such activities especially for the poor and poor performance from some of the prominent safety net programs The Report proposes complementary policy actions that offer a possible path for a more dynamic and prosperous rural economy The key pillars of this comprise macroeconomic stability increased productivity in agriculture faster urbanization better functioning safety nets and more inclusive financial markets Some recommendations call for a reorientation of existing programs such as the Malawi Farm Input Subsidy Program FISP and the Malawi Social Action Fund Public Works Program MASAF PWP Others identify

promising new areas of intervention such as the introduction of digital IDs and biometric technologies to enhance the reach of mobile banking and deepen financial inclusion Finally and importantly the report recommends the scaling up of investments on girls secondary education to curb early child marriage and early child bearing among adolescents This will empower women at home and work and bend the trajectory of fertility rates in rural areas in order to boost human development and reduce poverty

**Bioremediation and Biotechnology, Vol 3** Rouf

Ahmad Bhat, Khalid Rehman Hakeem, Najla Bint Saud Al-Saud, 2020-07-08 Healthy environment is important for any kind of biota on earth. It provides the basic elements of life such as clean water, fresh air, fertile soil, and supports ecosystem of the food chain. Pollution drastically alters quality of the environment by changing the physico-chemical and biological aspects of these components. Accordingly, toxic metals, combustible and putrescible substances, hazardous wastes, explosives, and petroleum products are all examples of inorganic and organic compounds that cause contaminations. Specifically, pollution of toxic and heavy metal in the environment is a growing problem worldwide currently at an alarming rate. Toxic metals threaten the aquatic ecosystems, agriculture, and ultimately human health. Traditional treatment techniques offer certain advantages such as rapid processing, ease of operation and control, and flexibility. But they could not maintain the quality of the environment due to the high operational costs of chemicals used, high energy consumption, and handling costs for sludge disposal, and overburden of chemical substances which irreversibly affect and destroy biodiversity which ultimately render the soil useless as a medium for plant growth. Therefore, bioremediation and biotechnology carried out by living assets to clean up, stabilize, and restore contaminated ecosystems have emerged as promising environmental friendly and affordable approaches. Furthermore, the use of microbes, algae, transgenic plants, and weeds adapted to stressful environments could be employed to enhance accumulation efficiency. Hence, sustainable and inexpensive processes are fast emerging as a viable alternative to conventional remediation methods and will be most suitable for developing countries. In the current volume, we discuss pollution remediation challenges and how living organisms and the latest biotechnological techniques could be helpful in remediating the pollution in ecofriendly and sustainable ways.

Instruction and Translanguaging BethAnne Paulsrud,Zhongfeng Tian,Jeanette Toth,2021-01-20 This book offers a critical exploration of definitions methodologies and ideologies of English medium instruction EMI contributing to new understandings of translanguaging as theory and pedagogy across diverse contexts It brings together a number of conceptual and empirical studies on translanguaging in EMI at different educational levels in a variety of countries with different approaches to translanguaging different named languages and different policies These studies include several underrepresented contexts across the globe providing a broad view of how translanguaging in EMI is understood in these educational settings Furthermore this book addresses the complexities of translanguaging through a discussion of the affordances and constraints associated with the use of multiple linguistic resources in the EMI classroom Paint and Coatings Industry Faris Yilmaz,2019-01-30 Some of the futuristic applications are nanotubes for electrically conductive coatings and to increase the rate of reaction of thermoset resins organosilane dendrimer coatings buckyball coatings for machine parts and metals for conductive coatings in inks The technology is limited to substantially specialized applications due to the high cost per unit volume needed to reduce the size of the particles and the need to add surface modifiers to prevent the particles from agglomerating Recent research efforts focus primarily on the functionalization of the particle surface of the nanoparticles to make them more compatible with the coating resin systems so that easy dispersion low viscosity and covalent bonding are provided between the particles and the resins Shakespeare in Malawi Amy Bonsall,

**The Rule Of Three And The Evolution Of Governance** Charles Lee,Peter Deh Caldwell,2021-02-22 The changing relationship between East and West principally between China and America has brought the whole matter of achieving peaceful and harmonious relations between nations to the fore particularly with regard to China s recent ascendancy in world affairs Competition among nations with different forms of governance raises important questions such as What forms of governance work best to enable people to have harmonious and peaceful life together both within and amongst nations What principles can we discover in human history that might point us toward some answers to this fundamental governance

question What might the answers from the past suggest about the future Where might the future lead To find answers to these questions we set out upon a discovery adventure going back some 30 000 years in time to trace the evolutionary progress in human governance from the hunter gatherer period until today We also adopted a framework provided by Dr Stephen Pinker s landmark study of the nature of violence over time entitled The Better Angels of Our Nature to provide context and contrast to our own discoveries We discovered several basic principles First the forms of human governance made an evolutionary progress over the past 30 000 years Second the most basic driver for this progress was and still is technological change which forces complementary changes in governance or seals institutional failure Third we discovered that just three basic factors determined whether a particular form of governance succeeded in flourishing as a tribe nation empire or nation state Those fundamental factors are boundaries founding mythology and the Rule of Three Indeed our most fundamental finding has been the Rule of Three itself the principle that says that dyads have inherently unstable natures whereas triads like three legged stools possess inherent stability Throughout time the most successful human arrangements have been those with intricate hierarchies of governance that have the Rule of Three deeply woven into each level As for the future we claim that the best international structure would take the symbolic form of an archipelago of nations interconnected with a system of bridges where each bridge consists of an intercourse route between two nations and the nature of the intercourse is largely trade in goods and services followed by cultural exchanges of ideas A Basic Principle It is far easier to build bridges between nations than to rebuild nations in some other nation s image Bad actors amongst nations may then get dealt with as villagers used to deal with nasty neighbors through shunning and shaming where shunning means the ceasing of trade intercourse
