Environmental Science Theory W.T. de Groot, 1992-10-22 Having no competitive works this unique publication presents a single structure for the analysis explanation and solution of environmental problems regardless of their location nature or scale In this problem oriented approach a coherent framework interconnects the study of facts and values environmental systems social causes and ethical premises Counterbalancing current biases the author emphasizes the fundamental normative economic and social scientific aspects of truly interdisciplinary environmental science For instance the normative side of environmental problems are often neglected resulting in policy designs and evaluations containing inefficient mixtures of sophisticated models and poorly grounded normative premises this is the first major study to enrich the field with more normative consistency and groundedness It is also the first text to consistently identify the social causes of environmental problems rather than focusing on the physical scientific aspects and thus design deeper and more effective policies Furthermore a tinge of post modern thinking runs throughout the book with special care being taken however to constantly keep in view the practical relevance of theory for problem oriented work The book will be of interest to environmental scientists and managers wishing to improve the consistency and depth of their work to social scientists and geographers wishing to connect their discipline to the environmental problems field and to general scientists interested in the connections between philosophy and practice

Education, Nature, and Society Stephen Gough, 2014-11-20 Environmental issues continue to

divide opinion sometimes in extreme ways Almost everyone agrees that education has a role to play in ensuring the future of humanity on Earth Some think we should all learn to leave a minimal environmental footprint others argue that education should promote economic growth because only growth can generate the capital needed to develop solutions to environmental problems Advocates on each side often find the views of their opponents simply incredible giving rise to accusations of bad faith or poor science This book explores the foundations of the debate by examining human interrelations with Nature It takes an educational perspective but also draws on evidence from anthropology economics ecology policy sciences and natural history The case presented is that any coherent view of the purposes and potential of education requires a theory of human society in the natural world For such a theory education and more broadly learning must be more than an instrument for the achievement of personal or policy goals Rather it is an integral continuing and necessary component of personal and policy development On this basis a novel approach to curriculum design and implementation is outlined
