with practical applications encouraging students to develop sustainable solutions and adopt responsible behaviors toward environmental protection and population control My hope is that this book not only serves as an academic tool but also inspires students to become active participants in creating a balanced and thriving world for future generations I extend my gratitude to the faculty of Bodoland University and the broader academic community for their support in shaping this work and I invite readers to engage critically with the content to foster meaningful dialogue and action Khrish Swargiary 2025

*Environmental Geopolitics* Shannon O'Lear, 2018-03-12 This thought provoking and clearly argued text provides a critical geopolitical lens for understanding global environment politics A subfield of political geography environmental geopolitics examines how environmental themes are used to support geopolitical arguments and physical realities of power and place Shannon O Lear considers common problematic traits of such familiar but widely misunderstood narratives about human environment relationships Mainstream themes about human environment relationships include narratives about presumed connections between human population trends and resource scarcity ways in which conflict and violence are linked to resource use or environmental degradation climate security and the application of science to solve environmental problems O Lear questions these narratives arguing that the role or meaning of the environment is rarely specified humans role in these situations tends to be considered selectively and little attention is paid to spatial dimensions of human environment relationships She shows that how we tend to think about environmental concerns often obscure value judgments and constrain more dynamic approaches to human environment relationships Environmental geopolitics demonstrates how we can question familiar assumptions to generate more just and creative approaches to our many relationships with the environment
