Tribunals Ceri Warnock, 2021-01-07 The global phenomenon of the establishment of specialist courts is one of the most important recent developments in environmental law Although they are generally seen as a much needed innovation they do pose challenges particularly around questions of legitimacy This important book tackles these questions directly looking specifically at the courts in the common law world It argues that to fully understand the nature of the adjudication of these courts a bottom up approach must be taken ie the question before the court is determinative Despite its theoretical focus the book will also provide invaluable insights to practitioners engaging with these new courts for the first time An innovative study on a seismic change in how environmental law is adjudicated The EU as a Global Regulator for Environmental

Protection Ioanna Hadjiyianni, 2019-08-08 This book critically examines the extension of EU environmental legislation beyond EU borders through measures that determine access to the single market on the basis of processes that take place in third

countries It makes a timely contribution to political debates about the relations between EU and non EU countries and the Union s role in the global governance of environmental policy where it has been considered a global leader The book aims to identify and explain the emerging legal phenomenon of internal environmental measures with extraterritorial implications as an important manifestation of EU global regulatory power and assesses the extraterritorial reach of EU environmental law from a legitimacy perspective It examines mechanisms that can bolster its legitimacy focusing on the legal orders of the EU and the World Trade Organization which are key legal fora for controlling the EU s global regulatory power

The Oxford Handbook of Law, Regulation and Technology Roger Brownsword, Eloise Scotford, Karen Yeung, 2017 The variety pace and power of technological innovations that have emerged in the 21st Century have been breathtaking These technological developments which include advances in networked information and communications biotechnology neurotechnology nanotechnology robotics and environmental engineering technology have raised a number of vital and complex questions Although these technologies have the potential to generate positive transformation and help address grand societal challenges the novelty associated with technological innovation has also been accompanied by anxieties about their risks and destabilizing effects Is there a potential harm to human health or the environment What are the ethical implications Do this innovations erode or antagonize values such as human dignity privacy democracy or other norms underpinning existing bodies of law and regulation These technological developments have therefore spawned a nascent but growing body of law and technology scholarship broadly concerned with exploring the legal social and ethical dimensions of technological innovation This handbook collates the many and varied strands of this scholarship focusing broadly across a range of new and emerging technology and a vast array of social and policy sectors through which leading scholars in the field interrogate the interfaces between law emerging technology and regulation Structured in five parts the handbook I establishes the collection of essays within existing scholarship concerned with law and technology as well as regulatory governance II explores the relationship between technology development by focusing on core concepts and values which technological developments implicate III studies the challenges for law in responding to the emergence of new technologies examining how legal norms doctrine and institutions have been shaped challenged and destabilized by technology and even how technologies have been shaped by legal regimes IV provides a critical exploration of the implications of technological innovation examining the ways in which technological innovation has generated challenges for regulators in the governance of technological development and the implications of employing new technologies as an instrument of regulatory governance V explores various interfaces between law regulatory governance and new technologies across a range of key social domains

Biotechnology Regulation and GMOs Naveen Thayyil, 2014-03-28 This thoughtful book explores how EU law treats serious disagreements about the development and use of a radically new technology like genetic modification Relevant EU laws are examined to analyse the room available or possible for public participat

Environmental Groups and Legal Expertise

Carolyn Abbot ,Maria Lee ,2021-03-04 *Environmental Groups and Legal Expertise* explores the use and understanding of law and legal expertise by environmental groups Rather than the usual focus on the court room it scrutinises environmental NGO advocacy during the extraordinarily dramatic Brexit process from the referendum on leaving the EU in June 2016 to the debate around the new Environment Bill in the first half of 2020 There is generally a weak understanding of both the complexity and the potential of legal expertise in the environmental NGO community Legal expertise can be more than a tool for campaigners and more than litigation it provides distinctive ways of both seeing the world and changing the world The available legal resource in the sector is not just a practical limit on what can be done but spills into the very understanding of what should be done and what resource is needed Mutually reinforcing links between capacity understanding culture and investment affect legal expertise across the board There are however pockets of sophisticated legal expertise in the community and legal expertise was heavily and often effectively used in the anomalously law heavy Brexit environment debate The ability to call on thinly spread legal expertise in a crisis was in part due to effective NGO collaboration around Brexit environment

Regulating Risks in the European Union Maria Weimer,Anniek de Ruijter,2017-10-05 A growing body of EU law and regulation is preoccupied with the protection of EU citizens from health and environmental risks Which chemicals are safe and should be allowed on the market How should the EU respond to public health emergencies such as Ebola and other infectious diseases Regulatory responses to these questions confront deep uncertainty limited knowledge and societal contestation In a time where the use of scientific expertise in EU policy making is particularly contested this book offers a timely contribution to both the academic and policy debate on the role of specialised expertise in EU public decision making on risk and technology as well as on its intertwinement with executive power It draws on insights from law governance political sciences and science and technology studies bringing together leading scholars in this field Contributions are drawn together by a shared theoretical perspective namely by their use of co production as an analytical lens to study the intricate interplay between techno scientific expertise and EU executive power By so doing this collection produces highly original insights into the development of the EU administrative state as well as into the role of regulatory science in its construction This book will be useful to scholars practitioners and policy makers working on risk regulation and the role of expertise in public decision making

Effective Environmental Regulation in China Federico Pasini,2021-06-16 Though recently improved Chinese legislation on environmental permits is still weak and urgent measures are needed to help the country in moving towards an effective permitting system This book examines this legislation gap and presents a contribution to solving China s pollution problems By analysing the deficiencies of current Chinese provisions on permitting in light of EU legislation and its Italian application the book determines which permitting legislative structure and approach China should embrace in practice in order to build more comprehensive legislation on emission permitting It is argued that a set of ad hoc legislative measures should be implemented so as to strengthen China s environmental protection and

efficiently tackle pollution The book will be a valuable resource for researchers academics and policy makers working in the areas of international environmental law and comparative law *Proceedings of IAC 2019 in Budapest* Group of authors,2019-03-13 International Academic Conference on Teaching Learning and E learning and International Academic Conference on Management Economics and Marketing and International Academic Conference on Transport Logistics Tourism and Sport Science Budapest Hungary 2019 IAC TLEI IAC MEM IAC TLTS March 15 16 2019
