

Eukaryotic Cell Structure: Organelles in Animal & Plant Cells

Why are organelles important and how are plants and animals different?

Why?

The cell is the basic unit and building block of all living things. Organisms can be unicellular or multicellular. Large multicellular organisms have many cells, and many types of cell. In order to survive both unicellular and multicellular organisms rely on the cell to perform all the necessary life functions. To do this certain functions must be separated within different areas of the cell.

A cell is often compared to a factory or other large structured organization, to help us understand how different parts of the cell perform different tasks.
