Magnetic Components for Power Electronics Alex Goldman, 2012-12-06 Magnetic Components for Power Electronics concerns the important considerations necessary in the choice of the optimum magnetic component for power electronic applications These include the topology of the converter circuit the core material shape size and others such as cost and potential component suppliers These are all important for the design engineer due to the emergence of new materials changes in supplier management and the examples of several component choices Suppliers using this volume will also understand the needs of designers Highlights include Emphasis on recently introduced new ferrite materials such as those operating at megahertz frequencies and under higher DC drive conditions Discussion of amorphous and nanocrystalline metal materials New technologies such as resonance converters power factors correction PFC and soft switching Catalog information from over 40 magnetic component suppliers Examples of methods of component choice for ferrites amorphous nanocrystalline materials Information on suppliers management changes such as those occurring at Siemens Philips Thomson and Allied Signal Attention to the increasingly important concerns about EMI This book should be especially helpful for power electronic circuit designers technical executives and material science engineers involved with power electronic components

Thermal and Electro-Thermal System Simulation Márta Rencz, Lorenzo Codecasa, 2019-11-18 With increasing power levels and power densities in electronics systems thermal issues are becoming more and more critical The elevated temperatures result in changing electrical system parameters changing the operation of devices and sometimes

even the destruction of devices To prevent this the thermal behavior has to be considered in the design phase This can be done with thermal end electro thermal design and simulation tools This Special Issue of Energies edited by two well known experts of the field Prof Marta Rencz Budapest University of Technology and Economics and by Prof Lorenzo Codecasa Politecnico di Milano collects twelve papers carefully selected for the representation of the latest results in thermal and electro thermal system simulation These contributions present a good survey of the latest results in one of the most topical areas in the field of electronics The thermal and electro thermal simulation of electronic components and systems Several papers of this issue are extended versions of papers presented at the THERMINIC 2018 Workshop held in Stockholm in the fall of 2018 The papers presented here deal with modeling and simulation of state of the art applications that are highly critical from the thermal point of view and around which there is great research activity in both industry and academia Contributions covered the thermal simulation of electronic packages electro thermal advanced modeling in power electronics multi physics modeling and simulation of LEDs and the characterization of interface materials among other subjects

Microgrids and other Local Area Power and Energy Systems Alexis Kwasinski,Wayne Weaver,Robert S. Balog,2016-07-14 A graduate text and professional reference covering all aspects of microgrid design and applications

Design and Power Quality Improvement of Photovoltaic Power System Adel A. Elbaset,M. S. Hassan,2016-11-24 This

book presents a case study on a new approach for the optimum design of rooftop grid connected photovoltaic system installation. The study includes two scenarios using different brands of commercially available PV modules and inverters. It investigates and compares several different rooftop grid connected PV system configurations taking into account PV modules and inverter specifications. The book also discusses the detailed dynamic MATLAB Simulink model of the proposed rooftop grid connected PV system and uses this model to estimate the energy production capabilities, cost of energy (COE), simple payback time (SPBT) and greenhouse gas (GHG) emissions for each configuration. The book then presents a comprehensive small signal MATLAB Simulink model for the DC/DC converter operated under continuous conduction mode (CCM). First, the buck converter is modeled using state space average model and dynamic equations depicting the converter are derived. Then, a detailed MATLAB Simulink model utilizing SimElectronics Toolbox is developed. Lastly, the robustness of the converter model is verified against input voltage variations and step load changes.

Electromechanical Motion Devices Paul C. Krause, Oleg Wasynczuk, Steven D. Pekarek, Timothy O'Connell, 2020-03-04.
