trying to decide if the benefits of a new medication are worth the chance of side effects or if artificial intelligence truly threatens humanity our lives are riddled with uncertainties both everyday and existential yet it can be difficult to know how to properly weigh all those unknowns Luckily for us renowned statistician David Spiegelhalter has spent his career dissecting data to resolve the apparently random and decode the many decisions we face with imperfect information In *The Art of Uncertainty* he shows how we can become better at dealing with what we don't know to make smarter choices in a world so full of puzzling variables In lucid lively prose Spiegelhalter guides us through the principles of probability illustrating how they can help us think more analytically about everything from medical advice to sports to climate change forecasts He demonstrates how taking a mathematical approach to phenomena we might otherwise attribute to fate or luck can help us sort hidden patterns from mere coincidences better evaluate cause and effect and predict what's likely to happen in the future Along the way we learn how a misinterpretation of a probability contributed to the infamous Bay of Pigs fiasco why a ship twice the size of the Titanic sank without a trace and why we can be so confident that no two properly shuffled decks of cards have ever been in the same order Sparkling with wit and fascinating real world examples this is an essential guide to navigating uncertainty while also retaining the humility to admit what we don't or simply cannot know **GCSE**

Committee of Public Accounts, 2009 Although the Department for Innovation Universities and Skills and its predecessor the Department for Education and Skills spent around 5 billion on basic skills courses between 2001 and 2007 9 billion by 2011 large numbers of the adult working population of England remain functionally illiterate and innumerate In 2003 an estimated 75 per cent of the adult population of working age had numeracy skills below the level of a good pass at GCSE and 56 per cent had literacy skills below this level In July 2007 the Government announced a new objective to help 95 per cent of the

adult population of working age achieve functional literacy and numeracy the level of skill generally needed to get by in life by 2020 Achieving this ambition would however only raise England to the standards currently achieved by the top 25 per cent of OECD member countries There are now separate targets for literacy and numeracy which focus on achieving the functional level of skill The new targets especially for numeracy will be challenging to meet and to date far less progress has been made tackling poor numeracy skills compared with literacy skills This is not helped by the low number of numeracy teachers available Many hard to reach people with poor literacy and numeracy skills come into contact with other government services such as Jobcentre Plus the Prison Service and the Probation Service More of these people are being encouraged to take up courses to improve their literacy and numeracy skills but the percentage who participate is still relatively small The Department's biggest challenges are reaching people in the workplace who lack skills and getting employers to recognise the benefits of raising the skills of their workforce
